AUGUST, 1894.

Calcarius lapponicus (Linn.). Lapland Longspur.

Has been taken at Wabash, Ind. One specimen. (Wallace).

Dendroica kirtlandi Baird. Kirtland's Warbler.

One specimen, Wabash, Ind., May 1, 1893 taken by W. O. Wallace. This is the first specimen of this rare warbler reported from the state. Mr. Wallace has very kindly presented me with the specimen.

The species was described from a specimen taken by Dr. Kirtland near Cleveland, O. The following are the reported records of its occurrence:

1. At sea off Abaco, Bahamas, by Dr. Samuel Cabot, second week in October, 1841.

2. Near Cleveland, O., by Dr. J. P. Kirtland, male, May 15, 1851. Type specimen.

3. Near Cleveland, O., by R. K. Winslow, female, June, 1860.

4. Near Cincinnati, O., by Charles Dury, male, first week in May, 1872.

5. Ann Arbor, Mich., by A. B. Covert, female, May 15, 1875.

6, 7. Rockport, Cuyahoga county, O., by Wm. and John Hall, May, 1878.

8. Andros Island, Bahamas, by Charles B. Cory, female, Jan. 9, 1879.

9. Ann Arbor, Mich., by A. B. Covert, female, May 16, 1879.

10, 11. Cleveland, O., reported by Dr. Langdon, male and female, May 4, 12, 1880.

12. Battle Creek, Mich., male, May 11, 1883, now in U. S. National Museum.

13. St. Louis, Mo., May 8, 1885. Otto Widmann.

14. Spectacle Reef, Mich., May 25, 1885. Wm. Marshall. Struck the light at Spectacle Reef light house.

15. Near Dublin Gap Springs, Pa., June 25., 1885. Prof. H. J. Roddy. He says: "Saw one with family."

16. St. Helena Island, S. C., Apr. 27, 1886. Walter Hoxie. Reports seeing three others.

17. Near Fort Meyer, Va., Sept. 25, 1887. Wm. Palmer. Another seen a week later.

18. Ann Arbor, Mich., Apr. or May 1888, female, by Mr. Knapp.

19. Chester, S. C., female, Oct. 11, 1888. L. M. Loomis.

20. Near Minneapolis, Minn., May 13, 1892, male. H. M. Guilford.

21. Wisconsin. Dr. P. R. Hoy. Reported seen.

22. Wabash, Ind., May 1, 1893. W. O. Wallace.

The winter home of this rare and narrowly restricted species is apparently the Bahama Islands. It has been taken most commonly during the

spring migrations near Cleveland, O. and Ann Arbor, Mich. It has never been taken in the interior of the United States during the fall migrations. The summer home of this warbler would seem to be northern Michigan and Wisconsin or north thereof and possibly in the mountains of Pennsylvania. The line of its spring movements seems to be a narrow route from the Bahamas past the western end of Lake Erie toward Lake Superior. Perhaps the return migration may be over the same route but it is possible this may be, in whole or in part, farther to the eastward passing down the coast after it reaches the Atlantic.

Its distribution is very remarkable. Yet there seems to be an effort on the part of other species to follow a line remarkably similar to that noted. From the northwest into South Carolina, even to the coast, there seems to be a migration route analogous to this. Along it would seem to move, in a southeastly migration, such forms as Brewer's Blackbird, Yellow-headed Blackbird, Leconte's Sparrow, Prairie Horned Lark, typical plains forms.
