-  Winter range

Population estimates of GCWA

Management and Recovery Status

GOLDEN-CHEEKED WARBLER NESTING RANGE

The golden-cheeked warbler migrates from Mexico to Central Texas each March to nest in juniper and oak woodlands. Its Texas habitat stretches across about 40 counties, including Burnet, Blanco, Hays, Travis and Williamson.

SOURCES: TEXAS PARKS AND WILDLIFE DEPARTMENT, U.S. FISH AND WILDLIFE SERVICE/ COMMUNITY IMPACT NEWSPAPER

GOLDEN-CHEEKED WARBLER RECOVERY

POPULATION

1990	2016
13,800	263,339

HABITAT

1990	2016
1,270 sq. miles	6,480 sq. miles

SOURCE: TEXAS PUBLIC POLICY FOUNDATION'S CENTER FOR THE AMERICAN FUTURE/COMMUNITY IMPACT NEWSPAPER

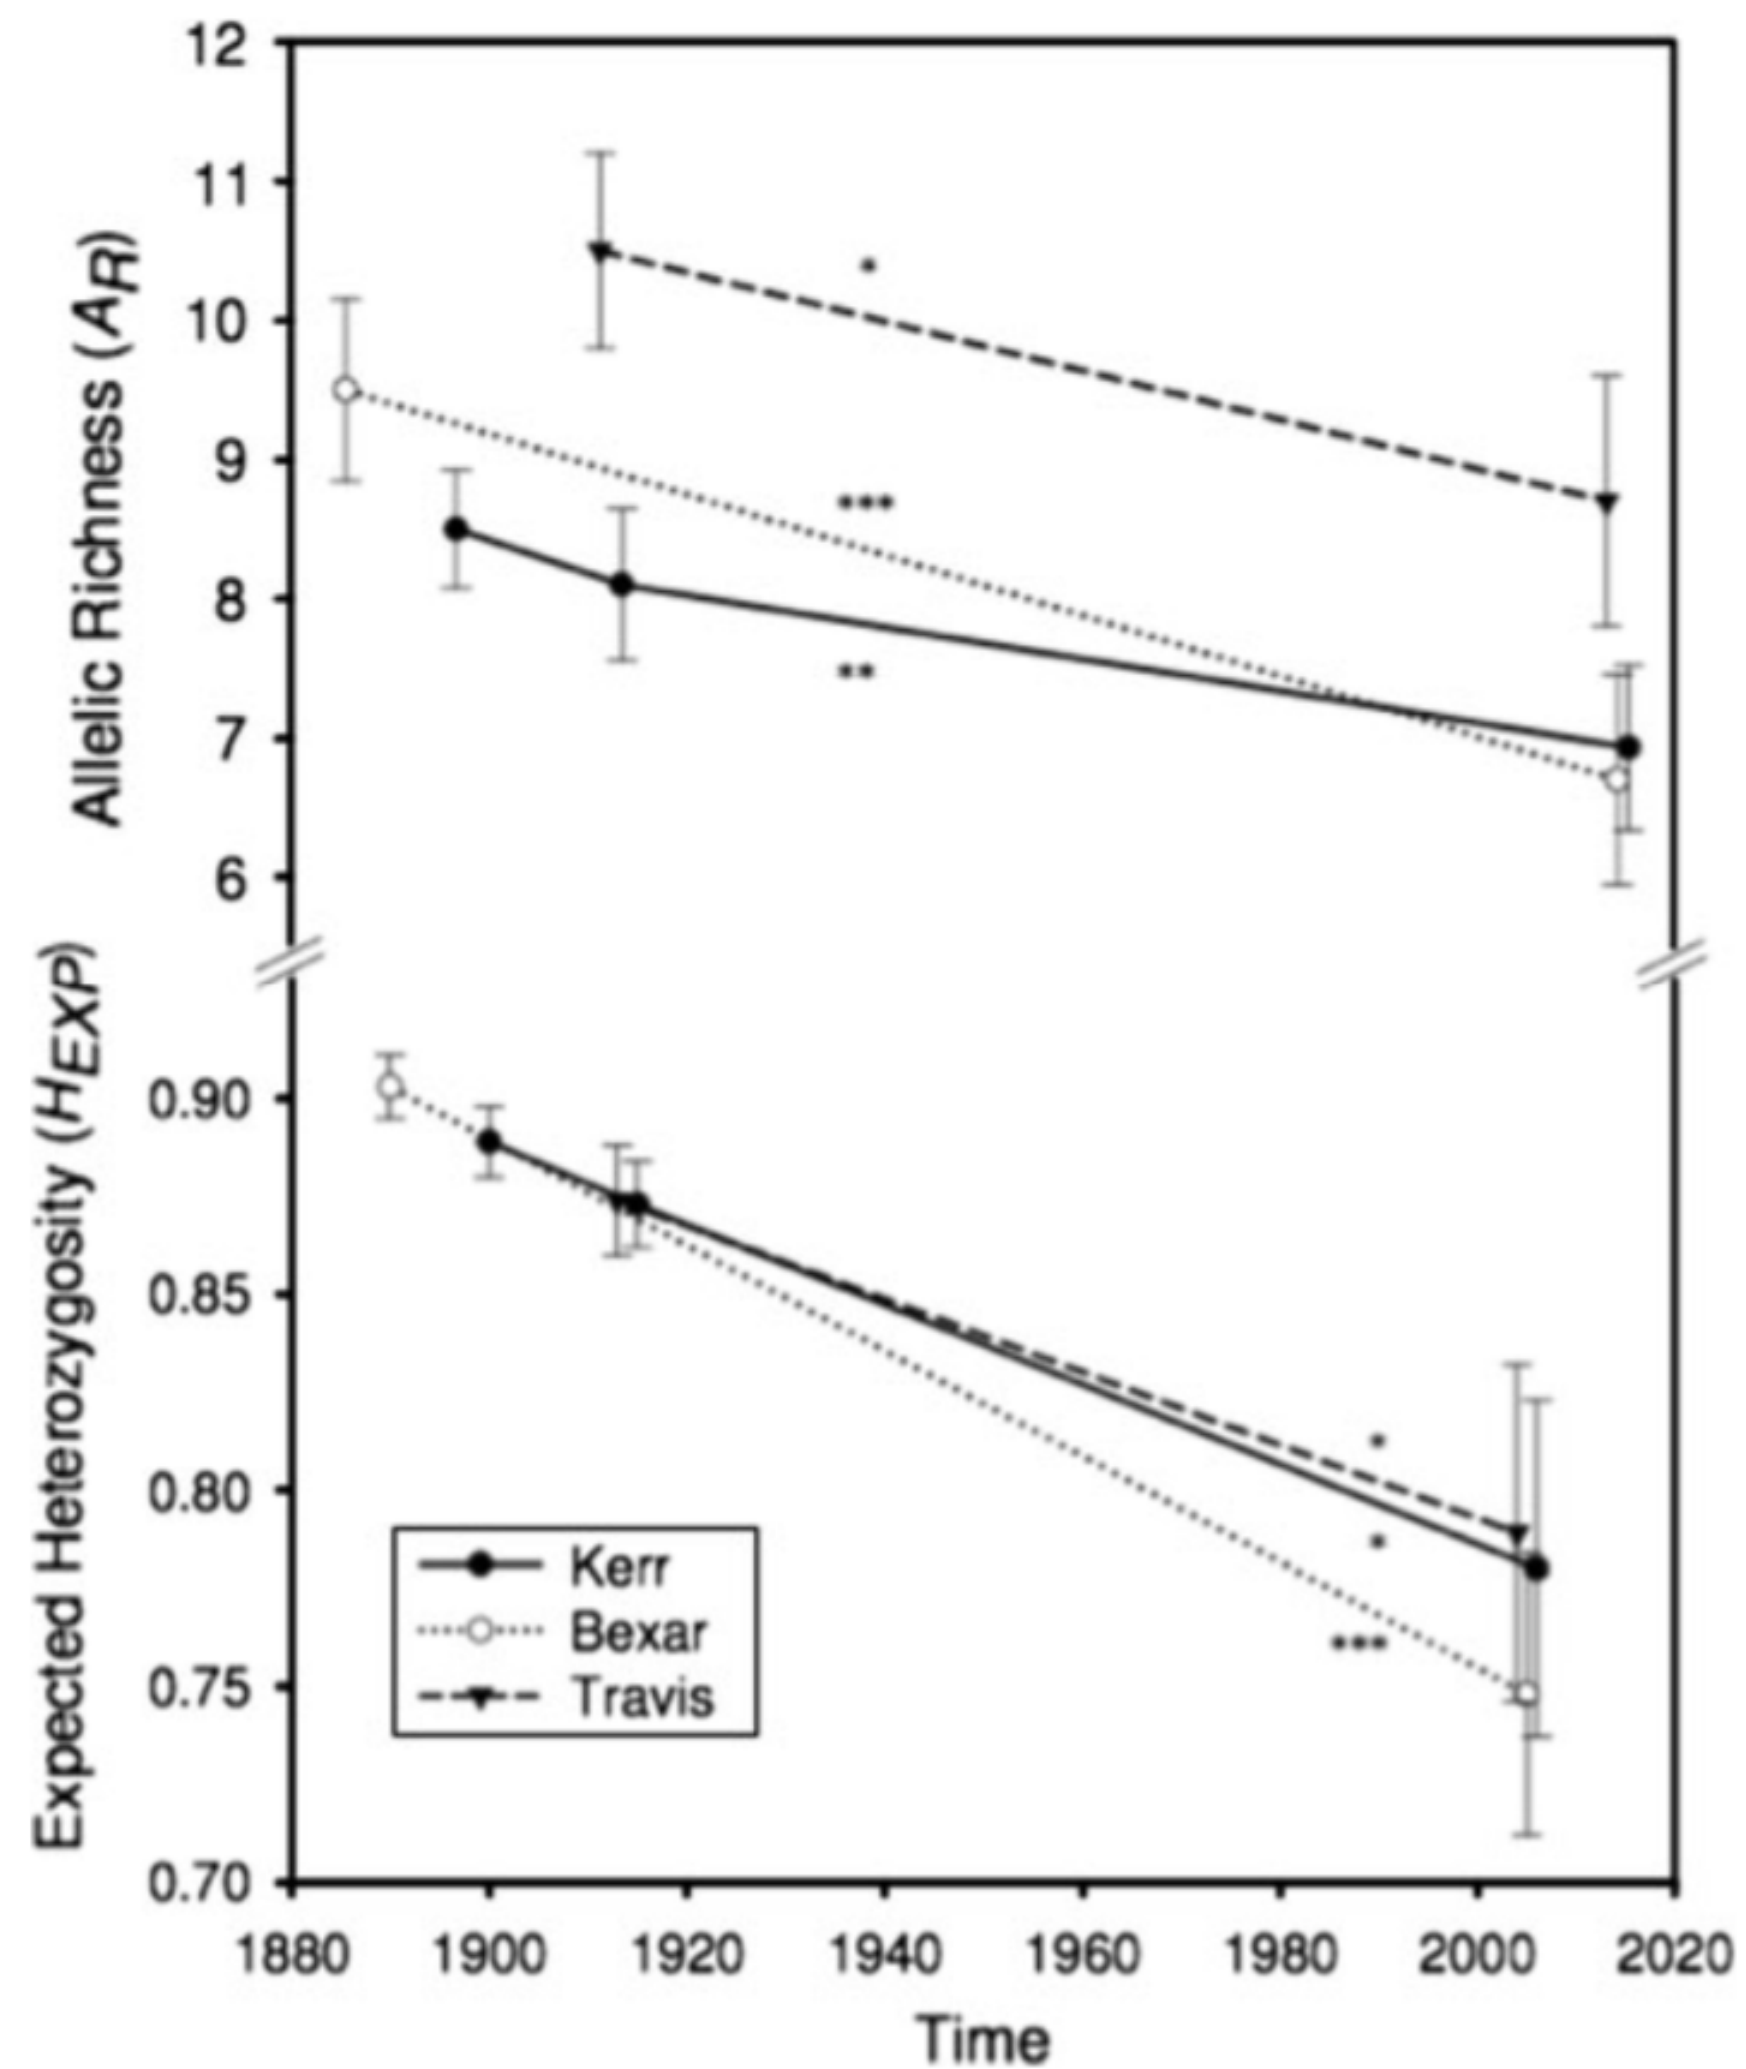

Estimated ~30% reduction in warbler breeding habitat between 2001-2011.

Previous genetic study showed decline in genetic diversity

How did habitat changes and population size changes impact genetic diversity?

Historical context needed to answer this question

How steep was the decline?

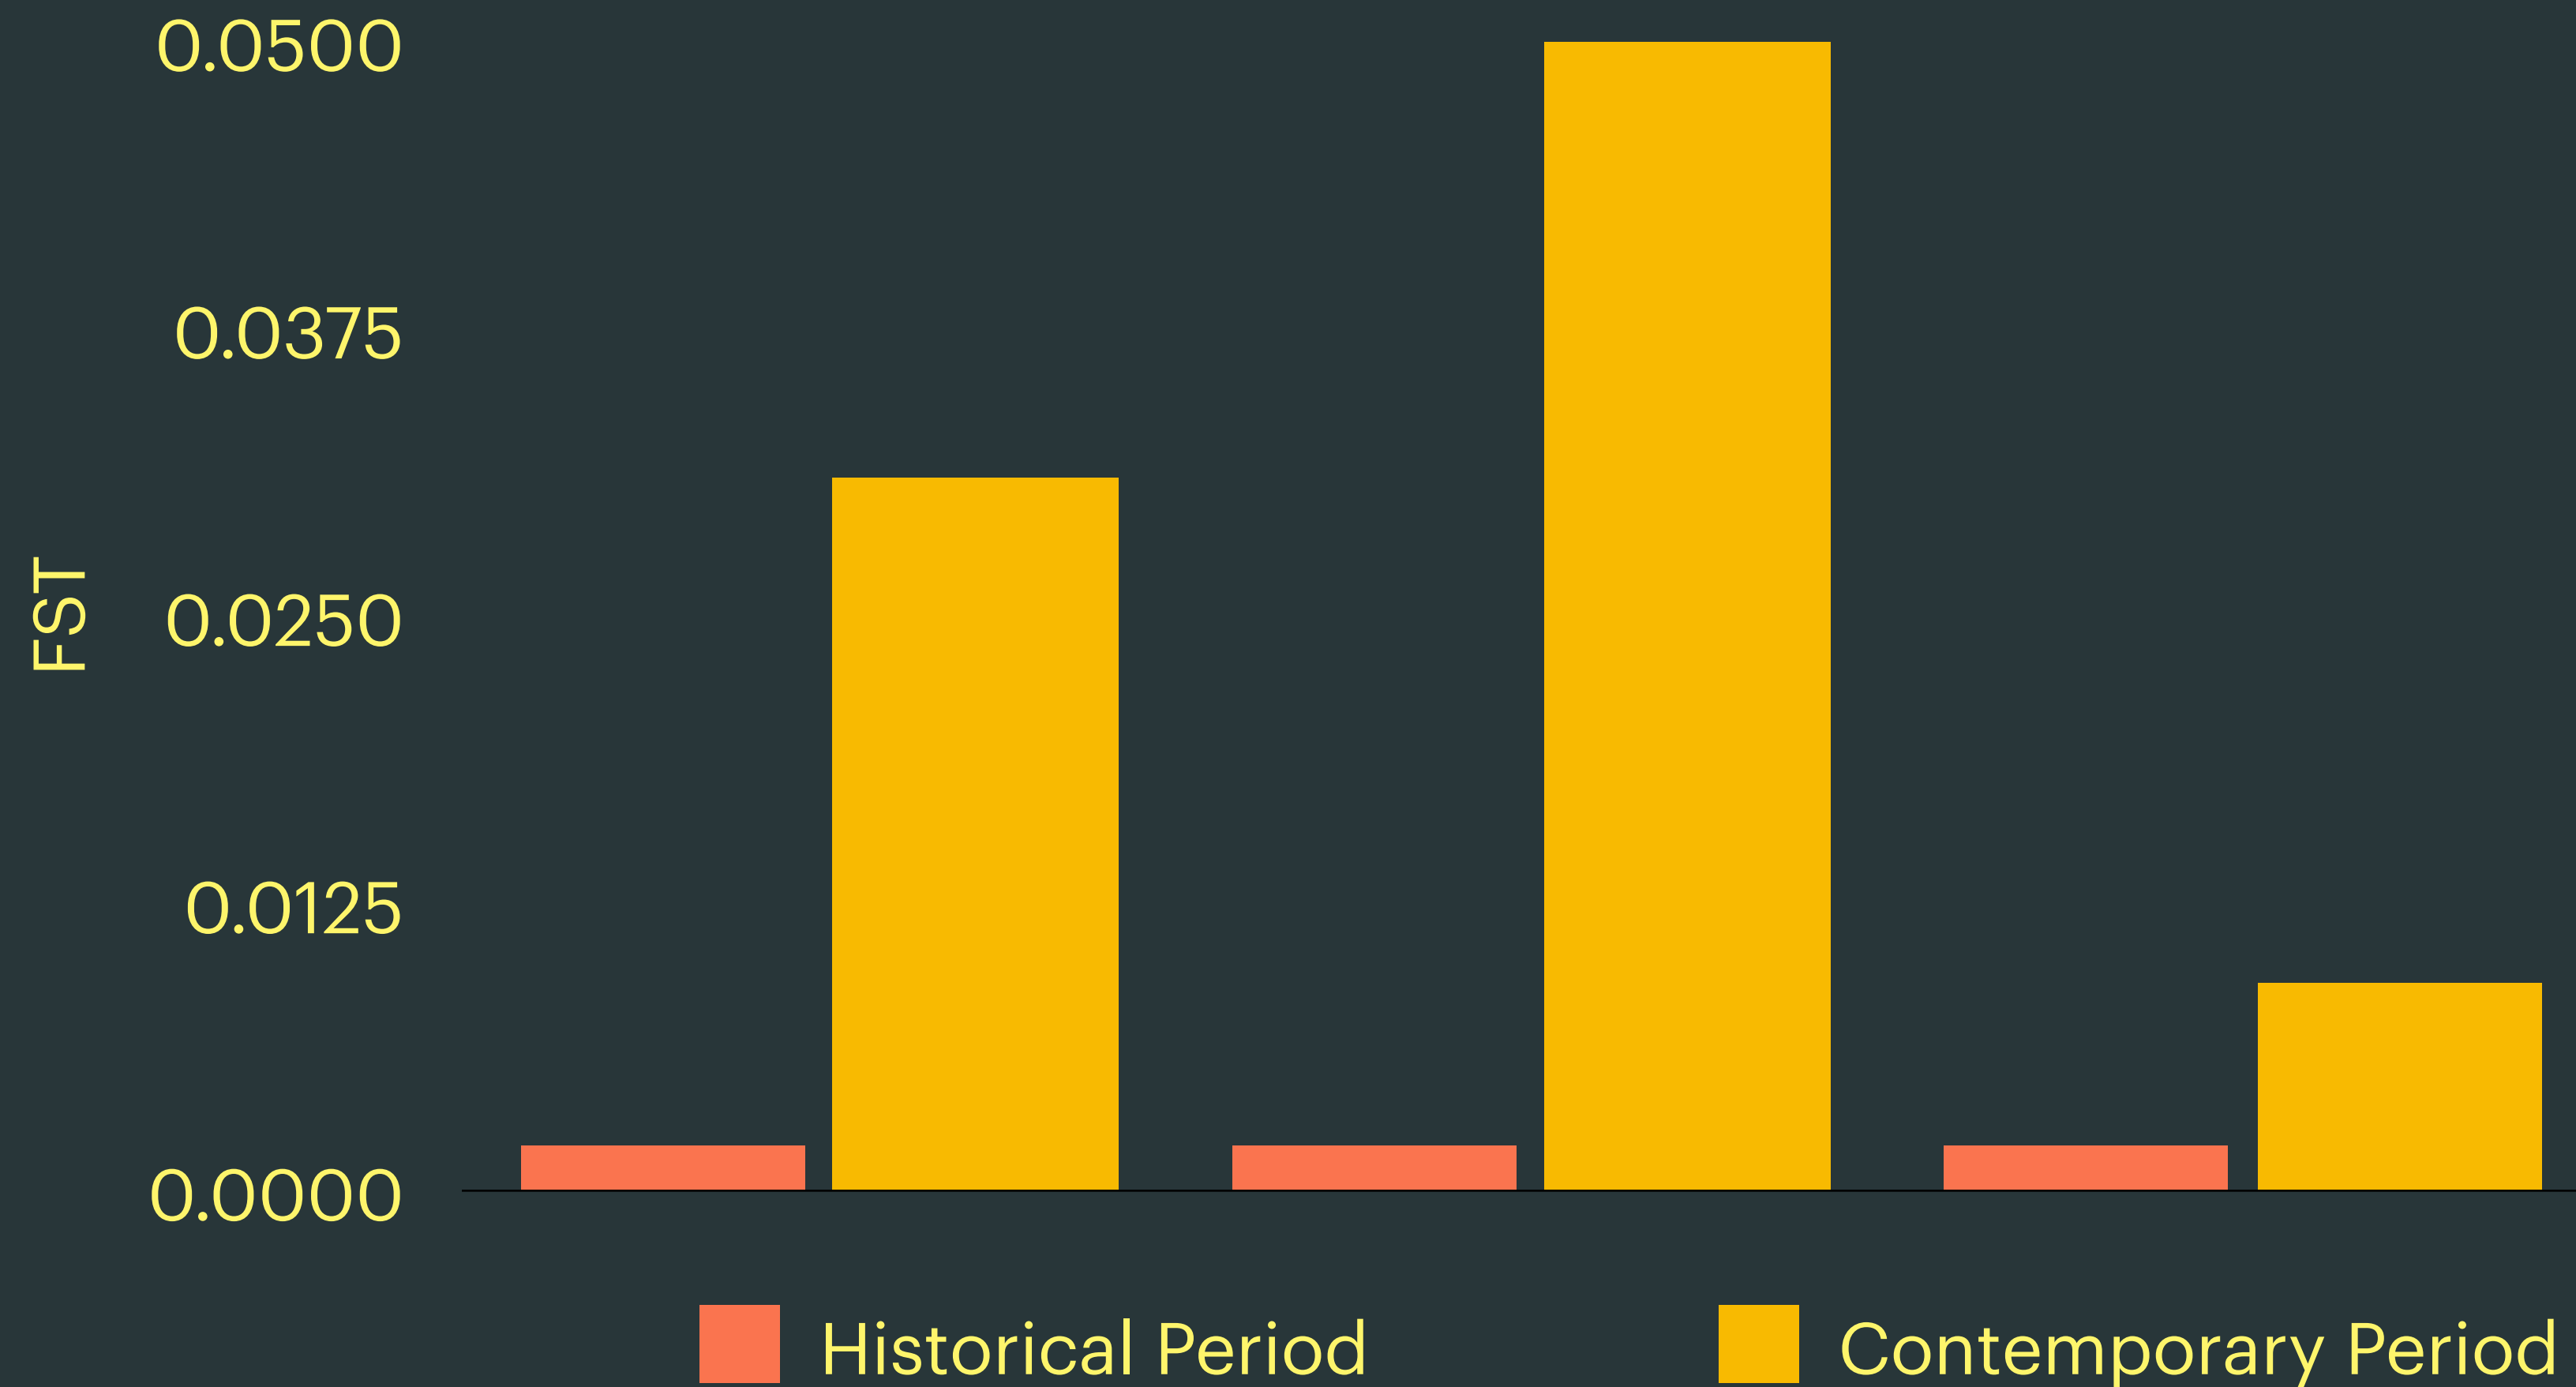

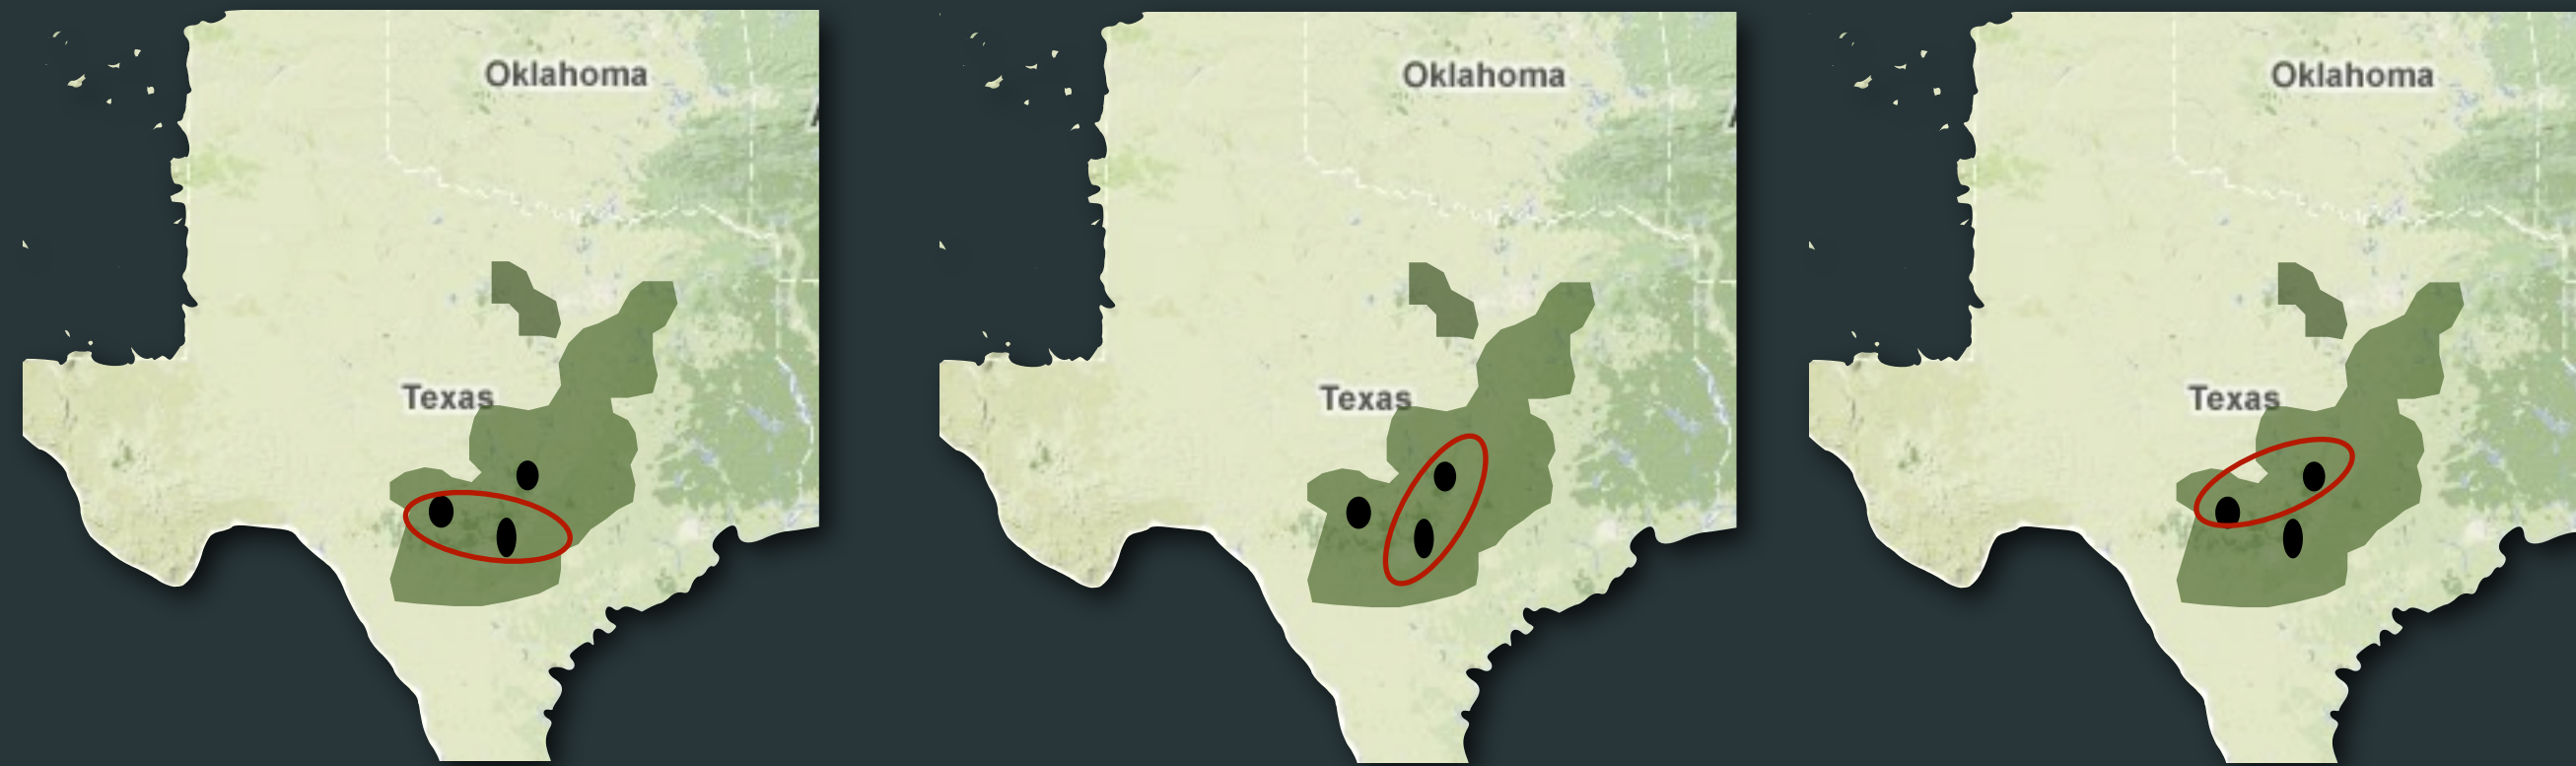

20-30% decline in measures of genetic diversity (on average)

original population

chance survivors

new population

Objective 1

To generate a *de novo* assembly of the GCWA genome using a combination of short-read and long-read sequencing technologies to be made freely to the public for future studies of GCWA and closely related species.

C. Strickland

What is a genome reference?

- A reference genome is a **haploid representation** of a species' genome
- Can be constructed from a single individual (more common now), or from a pool (common earlier)
- Alternate alleles (when known from population data) are assembled alongside reference locus
- Organized into chromosomes (best), or scaffolds (better), or contigs/supercontigs (ok).

JAPAN SURRENDERS, END OF WAR! EMPEROR ACCEPTS ALLIED RULE; M'ARTHUR SUPREME COMMANDER; OUR MANPOWER CURBS VOIDED

HIRING MADE LOCAL... Third Fleet Falls 5 Planes Since End... ALL CITY 'LETS GO'... PRESIDENT ANNOUNCING SURRENDER OF JAPAN... YIELDING UNQUALIFIED, TRUMAN SAYS

WASHINGTON, Aug. 14.—Japan today unconditionally surrendered the hemisphere empire taken by force and held almost intact for more than two years against the rising power of the United States and its allies in the Pacific war. The bloody drama of the Japanese military caste vanished in the text of a note to the Four Powers accepting the terms of the Potsdam Declaration of July 26, 1945, which applied the Cairo Declaration of 1943.

Like the previous items in the surrender correspondence, today's Japanese document was forwarded through the Swiss Foreign Office at Bern and the Swiss Legation in Washington. The note of total capitulation was delivered to the State Department by the Legation Charge d'Affaires at 6:20 P. M. after the fifth and most anxious day of waiting on Tokyo, the anxiety intensified by former premature or false reports of the final of World War II.

Orders Given to the Japanese... The Department responded with a note to Tokyo through the same channel, ordering the immediate end of hostilities by the Japanese, requiring that the Supreme Allied Commander... Arthur—be notified of the date and hour of the order, and... at the time and place selected by him—with full information of the disposition of the Japanese forces and com-

Treaty with China Signed in Moscow... Complete Agreement Reached with Chungking on All Points at Issue, Russians Say... The Japanese note and demand of full acceptance of the Potsdam Declaration, containing no qualification whatsoever; that arrangements for the formal signing of the peace would be made for the "earliest possible moment"; that the Japanese surrender would be made to General MacArthur in his capacity as Supreme Allied Commander in Chief; that Allied military commanders had been instructed to cease hostilities, but that the formal proclamation of V-J Day must await the formal signing.

Cruiser Sunk, 1,196 Casualties; Took Atom Bomb Cargo to Guam... The Japanese note and demand of full acceptance of the Potsdam Declaration, containing no qualification whatsoever; that arrangements for the formal signing of the peace would be made for the "earliest possible moment"; that the Japanese surrender would be made to General MacArthur in his capacity as Supreme Allied Commander in Chief; that Allied military commanders had been instructed to cease hostilities, but that the formal proclamation of V-J Day must await the formal signing.

World News Summarized... WASHINGTON, Aug. 14.—The Japanese note and demand of full acceptance of the Potsdam Declaration, containing no qualification whatsoever; that arrangements for the formal signing of the peace would be made for the "earliest possible moment"; that the Japanese surrender would be made to General MacArthur in his capacity as Supreme Allied Commander in Chief; that Allied military commanders had been instructed to cease hostilities, but that the formal proclamation of V-J Day must await the formal signing.

MacArthur Begins Orders to Hirohito... WASHINGTON, Aug. 14.—The Japanese note and demand of full acceptance of the Potsdam Declaration, containing no qualification whatsoever; that arrangements for the formal signing of the peace would be made for the "earliest possible moment"; that the Japanese surrender would be made to General MacArthur in his capacity as Supreme Allied Commander in Chief; that Allied military commanders had been instructed to cease hostilities, but that the formal proclamation of V-J Day must await the formal signing.

MacArthur Begins Orders to Hirohito... WASHINGTON, Aug. 14.—The Japanese note and demand of full acceptance of the Potsdam Declaration, containing no qualification whatsoever; that arrangements for the formal signing of the peace would be made for the "earliest possible moment"; that the Japanese surrender would be made to General MacArthur in his capacity as Supreme Allied Commander in Chief; that Allied military commanders had been instructed to cease hostilities, but that the formal proclamation of V-J Day must await the formal signing.

Objective 2

Perform a genetic assessment of GCWA population genetic diversity, structure, and population size history across the breeding range to inform species action plan and upcoming USFWS status review.

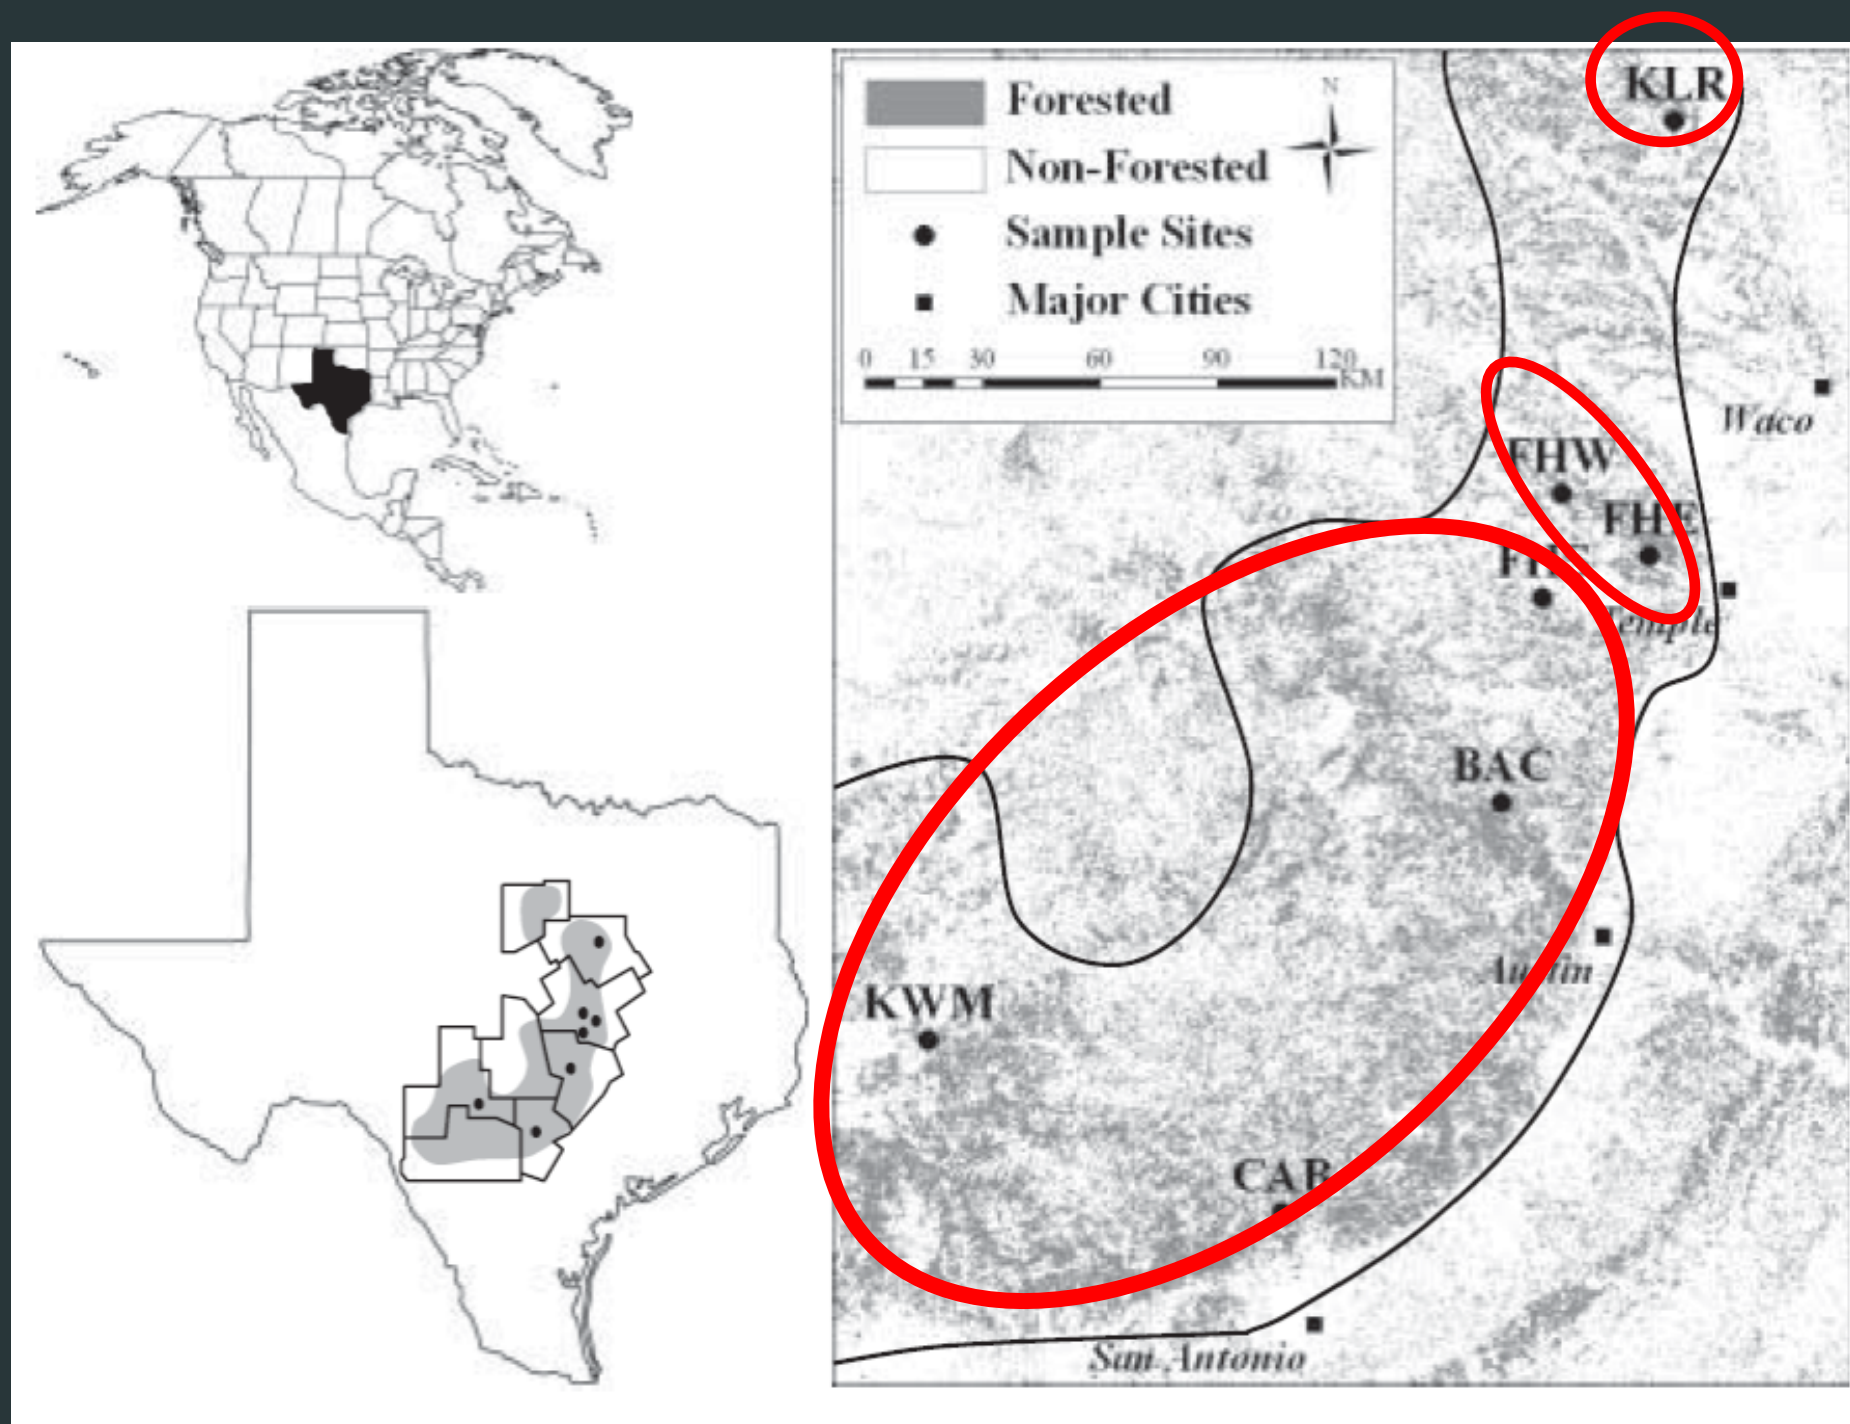

C. Strickland

Rationale

From Athrey et al. 2011:

Update work done by Lindsay et al. 2008 and Athrey et al. 2011 and to inform species action plan and upcoming USFWS status review.

Lindsay et al. 2008:

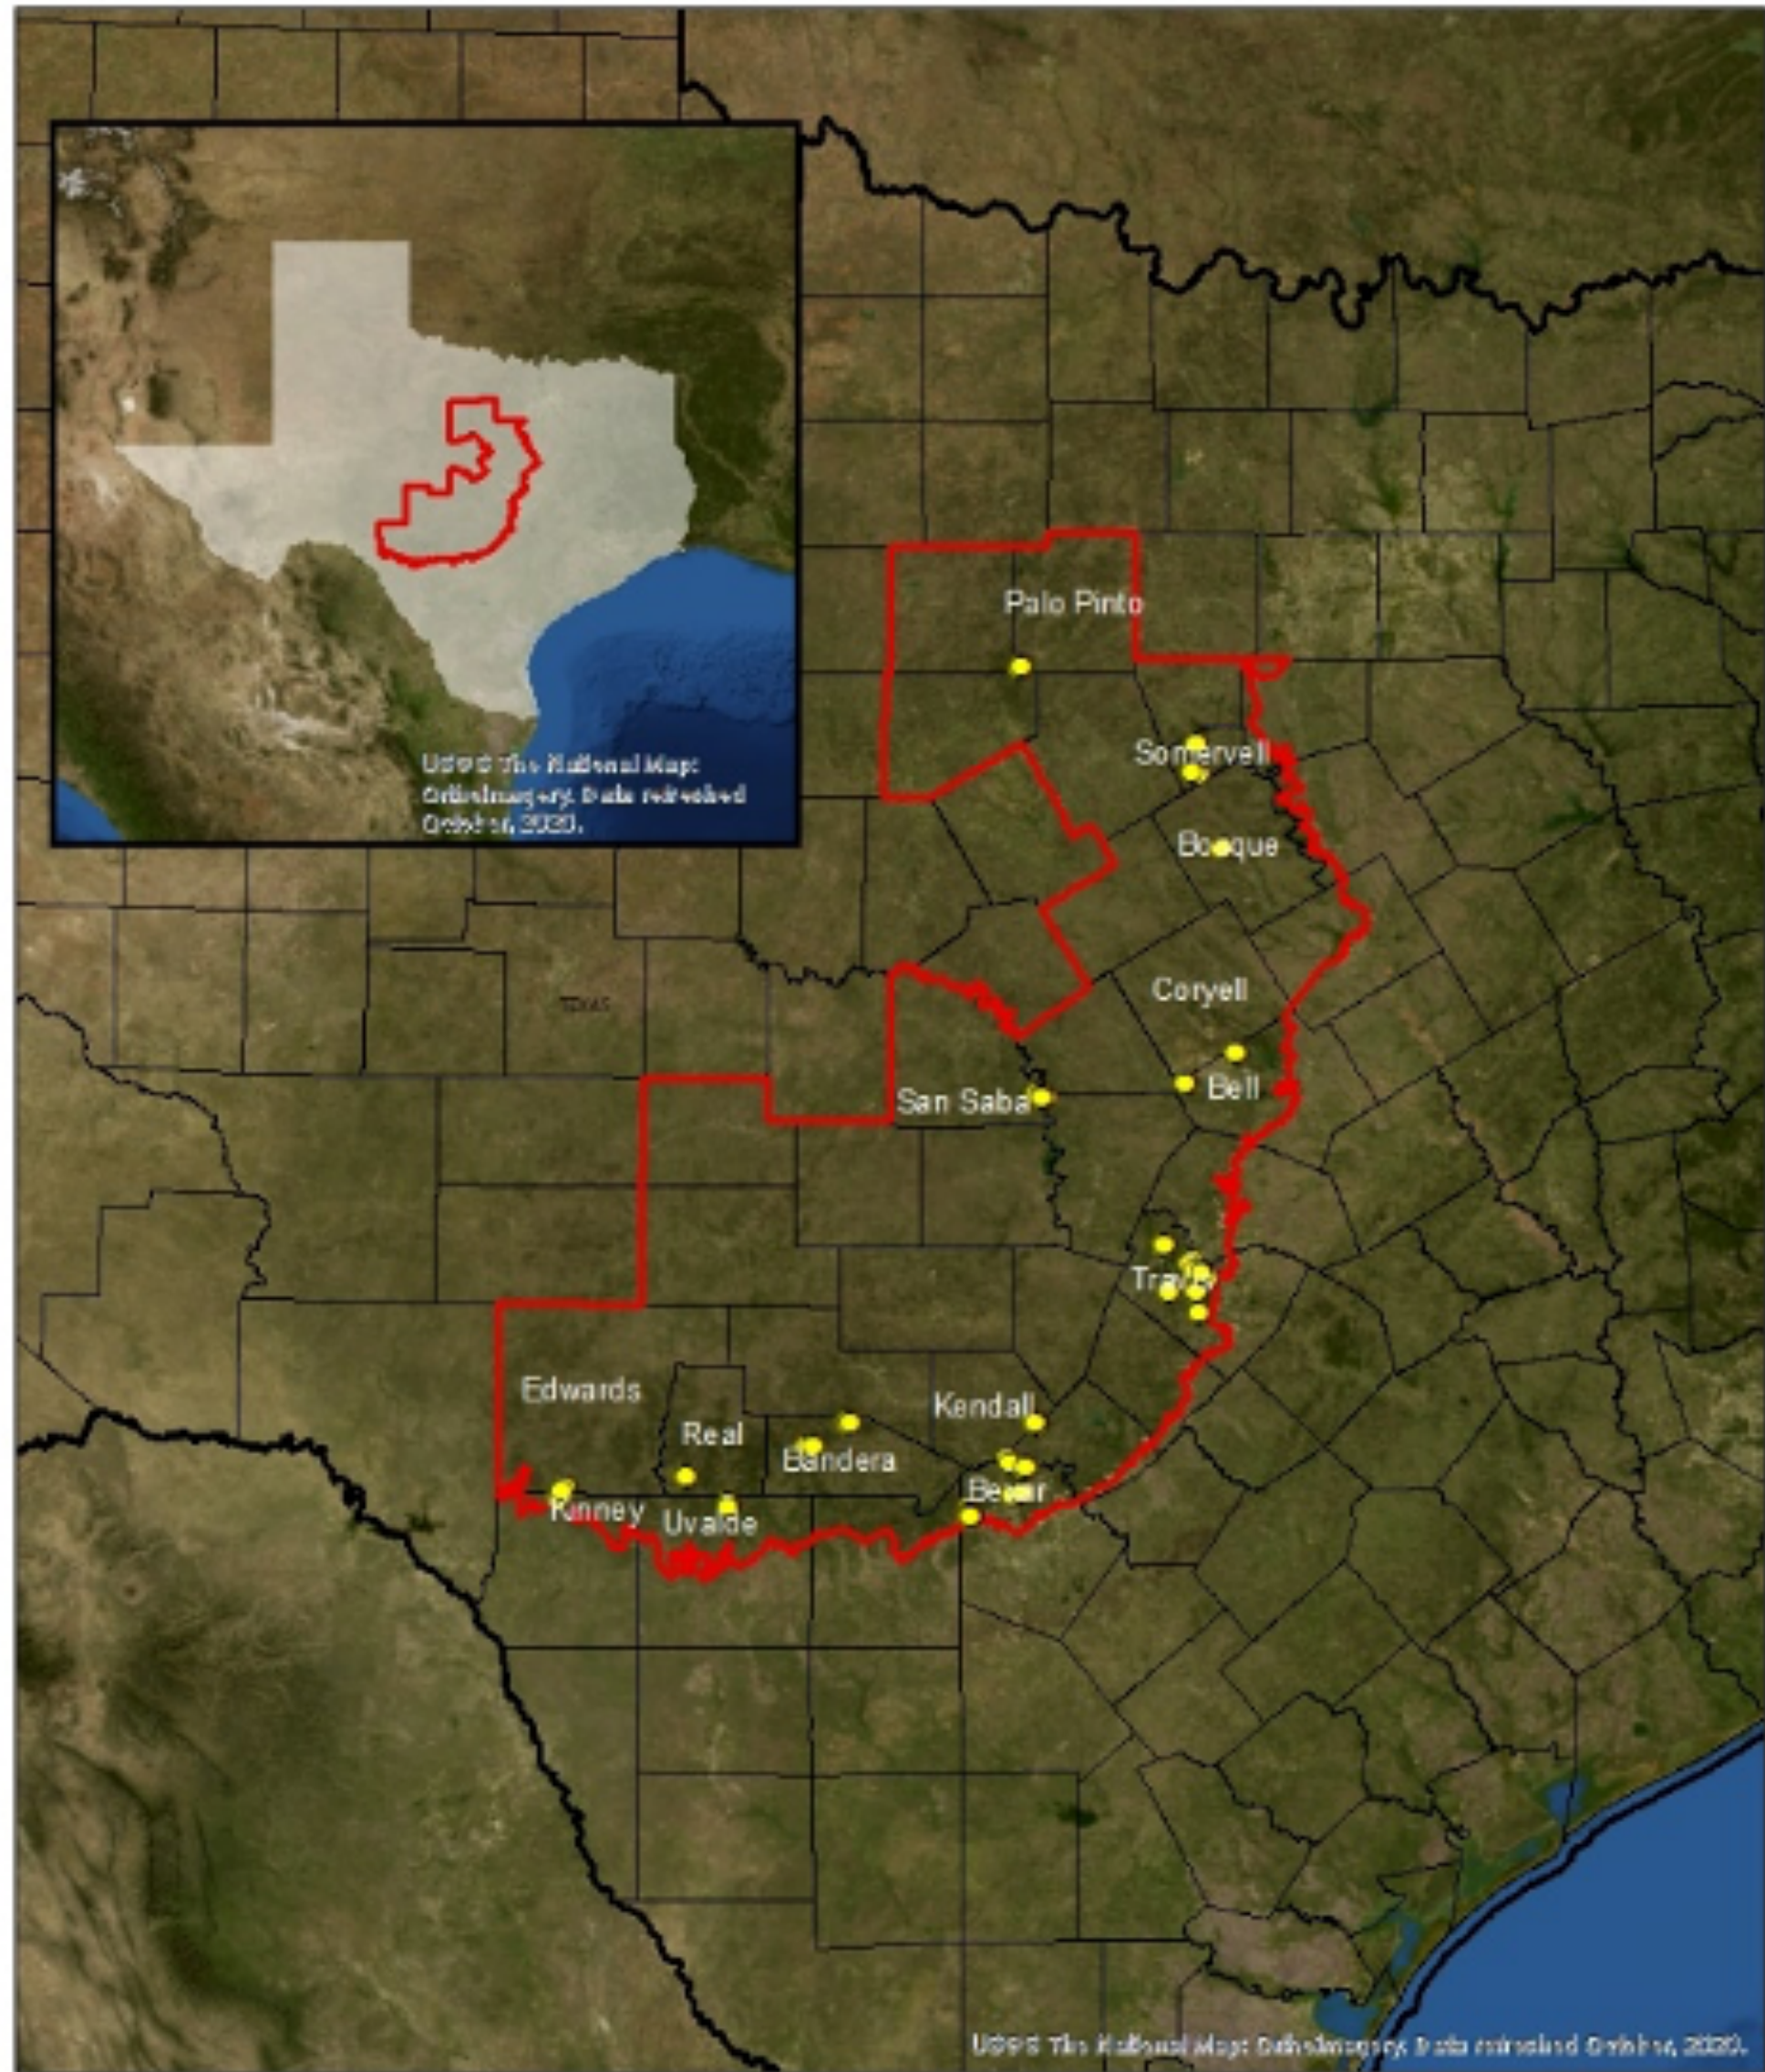

Fig. 2 Estimates of mean genetic diversity (with SEs) for historical and contemporary populations of *D. chrysoparia*. The hypotheses of no difference in estimates of allelic richness (A_R) and expected heterozygosity (H_{EXP}) were evaluated with a *T*-test ($\alpha = 0.05$). Symbols above each bar indicate significant pairwise differences (* $P < 0.05$; ** $P < 0.01$; *** $P < 0.001$)

- Sequenced DNA from all samples.
 - 43 samples had lower template quality/ library quality, and were not sequenced.
- Short PE libraries (150bp).
- Generated 12-15x genome coverage
 - Coverage is sufficient for calling heterozygotes and numerous population genetics analyses
- Analysis of genetic diversity and structure with open source tools.

Genome wide nucleotide diversity

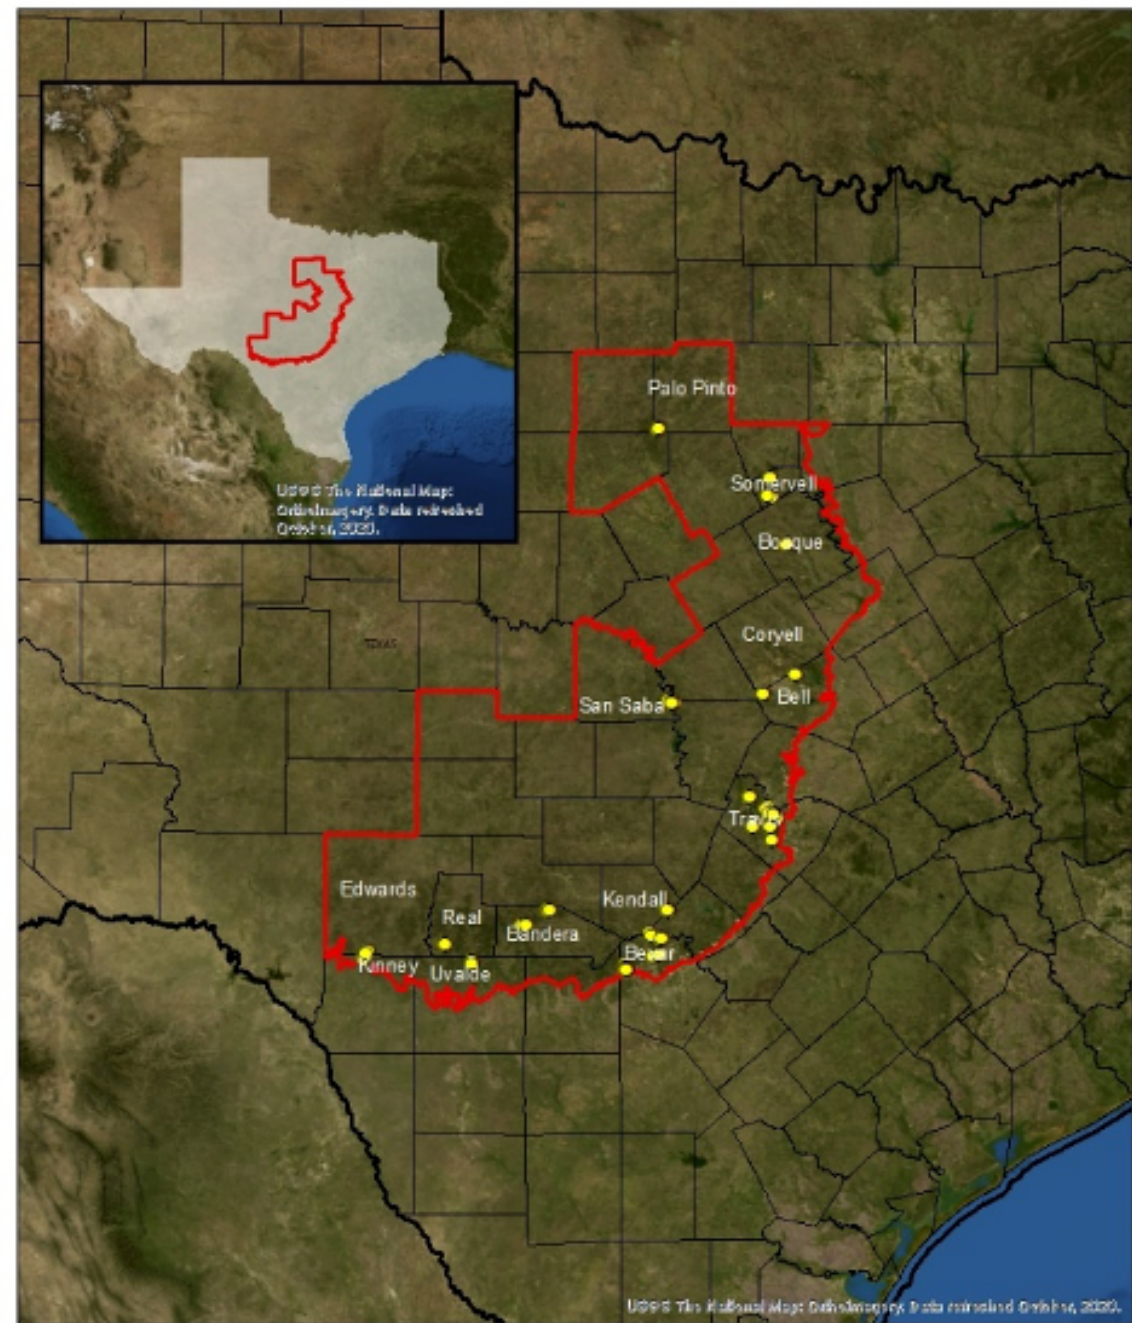

Contemporary Genetic Diversity

Table 2: Summary of the sample sizes per population, the population-wise inbreeding coefficients (F_i), and the observed heterozygosity (H_o). Genome-wide averages are presented by population, and a final species average is presented.

Population Genetic Structure

Population Genetic Structure

Historical Demography

Historical demographic reconstruction (with PSMC) based on heterozygous loci indicates that GCWA were relatively abundant during the Pleistocene and entering the Holocene (last 10k years).

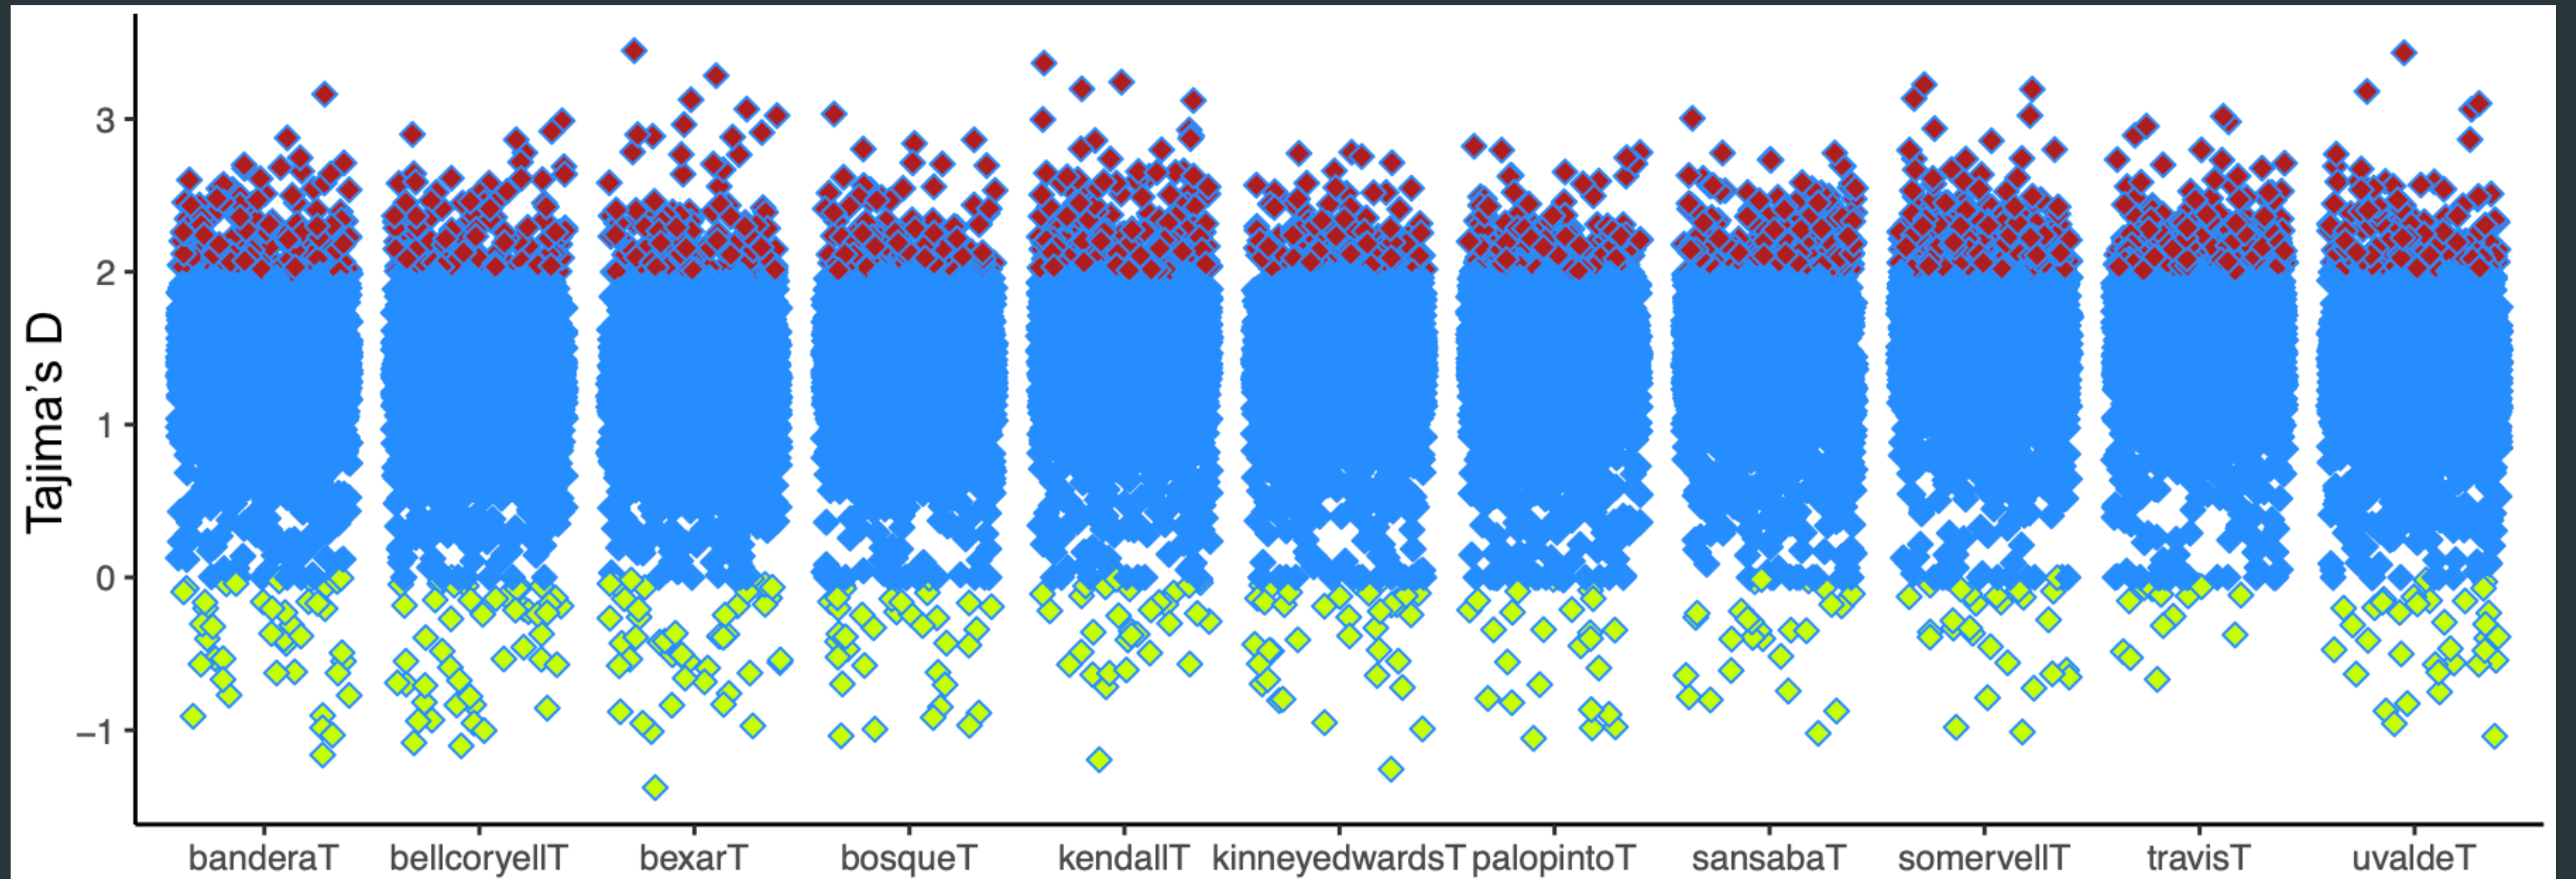

Current Effective Population Sizes

Table 3: Summary of the estimates of effective population sizes using three different methods in this study. When available, the numbers from the temporal estimates (MLNe) generated in the 2011 study are reported alongside. 95% confidence intervals are shown in parentheses when available.

Population	2011 study	N_e (Coancestry)	N_e (LD)	N_e (Het)
Bandera		152 (108-191)	78 (29-103)	5.9
Bell Coryell		140 (73-178)	72 (34-97)	4.8

Uvalde/Real		110 (93-128)	70 (49-103)	4.8

Genome wide Neutrality Tests

Conclusions

- GCWA shows a genome-wide average nucleotide diversity (π) of 0.0014
- Low levels of heterozygosity in every population surveyed, with a species average of 0.31
- There is a high level of inbreeding within each population, with medium to high levels of inbreeding coefficients
- Bexar and Palo Pinto population show high degree of isolation
 - Bell Coryell is not evenly connected with all populations
- Lack of significant Isolation-by-distance, which can be suppressed by low heterozygosity
- Effective population size estimates show clear evidence for small population sizes and recent bottlenecks
- **Overall, lack of genomic evidence supporting a genetic recovery, and increasing isolation of some populations**
