

VOLUNTEER PARTNERS NEEDED FOR THE NIOSH NANOTECHNOLOGY FIELD RESEARCH EFFORT

The National Institute for Occupational Safety and Health (NIOSH) has a field research team available to visit and assess processes involving research, production, and use of nanomaterials. The function of the team is to characterize materials, processes, potential worker exposures, work practices, and control procedures. Information and recommendations will be shared with the business partner being visited and will be used by NIOSH to periodically update the guidance that appears on the Nanotechnology Topic Page: www.cdc.gov/niosh/topics/nanotech. *There is no cost to participate.*

If your organization is interested in volunteering to participate, please contact one of us.

Charles L. Geraci, PhD, CIH
Chief, Document Development Branch
