## Headquarters Air Combat Command

# IH's Role in CBRNE: Innovation

Capt Bob Campbell, PE HQ ACC/SGPB 24 May 05

This Briefing is: UNCLASSIFIED

## **Overview**

- Current DODI 6055.5, Industrial Hygiene and Occupational Health
- Draft DODI 6055.5, Occupational and Environmental Health
- EOH/ORM Process
- Joint Preventive Medicine Equipment Sub-Group (JPMESG) Role
- Interoperability and Joint Ops
- Questions

#### **DODI 6055.5**

- Addresses in-garrison occupational risks
  - Applies worldwide
  - Focused on traditional workplace, not environmental/operational hazards
  - Does not adequately address CBRNE or deployed surveillance
- States surveillance result should be a "definite...determination as to the presence, absence, or degree of health hazard"
  - Appropriate standard
  - Difficult to achieve with limited and basic equipment set
  - Entire process not supported with IM systems in deployed environment
  - Assessments tied to standards vs health risks

Little role in CBRNE, not specifically addressed

### Draft DODI 6055.5 Overview

- Risk-based perspective: ORM process
- Addresses environmental health surveillance, combat operations, and workplace surveillance in-garrison and deployed
- Train to protect workers from CBRNE hazards
- Components responsible for:
  - ID/assess health effects of mil unique occ/env conditions
  - Mitigate impact of mil-unique ops on health/mission
  - Support field level OEH operational effectiveness
  - Asst development of methods to rapidly/accurately assess health consequences from CBRNE events and to control exposures

Components shall collect and use health information for supporting the risk management process during all phases of military operations (DoDI 6490.3, DoDI 6055.1 and Presidential Review Directive (PRD)-5, references (c), (d), and (l))

IHs have large role in CBRNE, similar to workplace surveillance

## Draft DODI 6055.5: Risk Management

#### A CBRNE Perspective

- 1. Identify/assess hazards
  - a. Characterize hazards
  - b. Identify SEG
  - c. Develop monitoring plan
- 2. Assess the risk
  - a. Exposure characterization: Time and Severity of exposure Personal exposure monitoring, extrapolation from similar operations, area monitoring (ie, environmental sampling), mathematical modeling
  - b. Exposure determination: Is it acceptable? Stds? Judgment? Tox data?
- 3. Develop controls/make risk decisions
  - a. Recommend controls
  - b. Report exposures to commanders, medics, line personnel
- 4. Implement controls: Edu and Training
- 5. Supervise and re-evaluate
  - a. OEH control evaluation
  - b. Clinical/Medical monitoring: Occ exams, epi, trend analysis

## Equipment Limitations: Challenges, Shortfalls, LL from OEF/OIF

Risk Management Process	Typical Equipment Set	Equipment-related Limitations
1. Identify/assess hazards		Knowing our equipment capabilities/limitations
2. Assess risk	Corporation Service 13-	Occupational stds, presence/ absence detectors, high LOD, false+-, chem-bias, limited scope of detection
3. Develop controls		False sense of security
Implement risk decisions		Ad hoc exposure reporting to personnel
4. Implement controls		Under/over-responding to hazards, potentially leading to unexplained disease
5. Supervise and Evaluate		Over-reliance on negative doc, exposure assessment based on models, not sampling/analysis/monitoring

## Joint Preventive Medicine Equipment Sub-Group

#### History

- 2002: Ad-hoc group comprised of multi-service, interagency SMEs
- 2003: Sought joint equipment, doctrine, SOPs, training
- 2004: Delivered solutions
- 2005: Chartered sub-group to JESWG; merged w/equipment grp

#### Mission

- Enhance interoperability through common equipment, training, doctrine
- Optimize current equipment to enhance risk management

#### Accomplishments

- HAPSITE Gas Chromatograph/Mass Spectrometer
- HAZMATID Fourier Transform Infrared Spectrophotometer
- DR4000U VIS Spectrophotometer
- Explore other equipment, doctrine/organization improvements

## **Equipment Optimization**

- **HAPSITE® Testing Product enhancements:** 
  - **Program Manager WMD-CSS**
- **HAPSITE® Optimization Calibration curves:** 
  - **Marine Corps Systems Command**
  - **Navy Environmental Health Center**
- **HazMatID® Optimization Toxins/Anthrax:** 
  - Air Force
- HAPSITE®/HazMatID® **Course Curriculum Development**
- **Proficiency in Testing Quality Assurance Program** (Proficiency Analytical Test (PAT) Rounds):
- **USUHS Student Projects:** 
  - Hapsite/SPME
  - **Hapsite Transportability of Cal Curves Project**
  - **HazMatID Pesticide Library Development**
  - Hach DR 4000 Project

  - •USA

JPMESG

## JPMESG Enhancements

Risk Management Process	Optimized Equipment Items	Equipment-related Enhancements
1. Identify/assess hazards		Broader hazard ID scope
2. Assess risk	DOEHRS DORARS	Less false+-, very low LOD, enable quantitative analysis, support ORM model in draft DODI 6055.5, shorten collection-results loop, higher confidence
3. Develop controls Implement risk decisions	100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 100.00 10	Informed decision-making, improved operational effectiveness
4. Implement controls		Limit time in PPE/MOPP, limit decon burden
5. Supervise and Evaluate	CHI BERT DEPERS	More thorough health risk assessments

## Interoperability and Joint Ops

- Sharing a common capability...
  - Equipment
  - Training
  - Operator proficiency testing, equipment performance standard
  - Knowledge, doctrine
- ...while retaining our service specific capabilities and culture
- Improved interoperability enhances joint ops

## Way Ahead

- Optimize other equipment
- Drive standardization
  - Equipment
  - Training
  - Doctrine
  - Proficiency PAT
  - Organizational
- More complete tox data
- Full-spectrum analysis
- Joint Preventive Medicine capability concept
  - Interoperable PM teams
  - Standardized equipment, training, capability

#### The Future

#### Joint PM team:

 Analyzing real-time geo-spatial data streaming from Joint Personnel Dosimeters and Area Monitors, that collect operationally relevant CBRNE-P exposure data, which is tracked in the Joint Medical Information System, and backed up into the Joint Health Record.
