Why Does DoD Monitor Birds?

- **Support the training and testing mission!**
- **Compliance with legislation**
- **Obtain basic inventory data**
- **Identify problems and their causes**
- **Help design management programs**
- **Evaluate successes and failures of management**

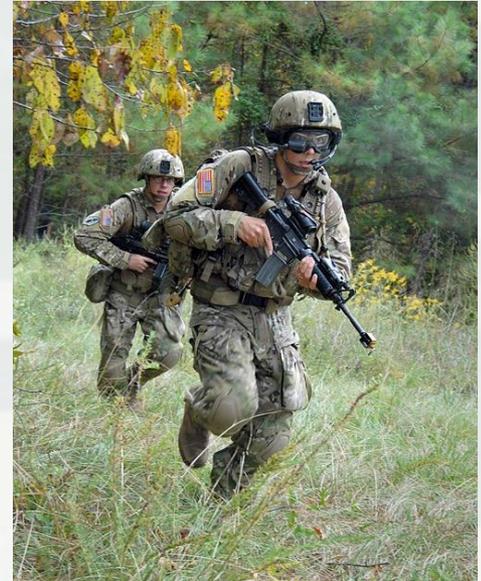

Why Does DoD Monitor Birds?

Monitoring for Support of the Training and Testing Mission

- Support the military mission by ensuring sustained access to land, air and sea resources while:
 - Protecting important natural and cultural resources
 - Meeting all legal requirements
 - Promoting compatible multiple uses

Why Does DoD Monitor Birds?

Compliance with Legislation

- **Migratory Bird Treaty Act (1918)**
- **Endangered Species Act**
- **Executive Order 13186**
 - ❖ **2001 - “Responsibilities of Federal Agencies to Protect Migratory Birds”**
- **Sikes Act**
 - ❖ **Recognizes the importance of military lands for their natural resources and provides mechanism for their conservation while still meeting the military mission.**
- **Migratory Bird Rule**

A Report Prepared for the Legacy Resource Management Program

November 2008

“The CBM Plan is intended to insure that DoD meets its conservation and regulatory responsibilities for monitoring birds, especially under the recently signed MOU for migratory birds and the Final Rule authorizing take of migratory birds promulgated by the US Fish and Wildlife Service”

A Coordinated Bird Monitoring Plan for DoD

What have we done so far?

- Review of existing monitoring programs
- Provided guidelines for monitoring surveys
- Increased value of monitoring
- Identified DoD Mission-sensitive Bird Species of Concern for focused monitoring
- Integrated DoD's role into continental programs
- Mining of archived data into the Avian Knowledge Network at Cornell Lab of Ornithology and USGS/Boise

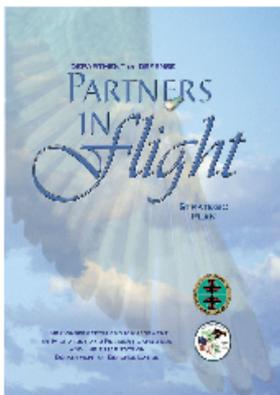

Department of Defense
Partners in Flight

Fact Sheet #11
August 2012

Department of Defense
Partners in Flight Program

Mission

To conserve migratory and resident birds and their habitats on Department of Defense lands.

The Strategic Plan and other resources can be found at www.dodpif.org

DoD PIF Mission-Sensitive Priority Bird Species

*Minimizing Future Listings of Bird Species
to Protect and Sustain the Military Mission*

The DoD Partners in Flight Program has identified nearly 100 bird species that occur on DoD lands and are at risk of becoming listed as threatened or endangered under the federal Endangered Species Act if current populations trends continue. The purpose of this list is to help DoD resource managers better prioritize monitoring and management efforts on those species (and their habitats) having the highest potential to impact the military mission should they become Federally listed. A secondary focus was on those species with significant conservation concern on DoD lands.

To determine what migratory bird species are of highest "concern" to the Department of Defense, each DoD Partners in Flight Working Group member was tasked in 2008 with providing a list of their "Top 10" species of concern within their area of responsibility (exclusive of Federally-listed species). DoD representatives from all regions (Southeast, Northeast, Midwest, West, Alaska, and Hawaii), representing all military service branches, provided the initial input. Installation managers on Oah'u, Kauai'i and Hawai'i were queried for Hawaiian priority species. After two annual meetings of the DoD Partners in Flight Working Group and numerous reviewed iterations of the list, a final list was generated for use as a baseline for making better decisions about how to focus future DoD avian monitoring efforts. All bird species on the USFWS 2010 Candidate Notice of Review list known to occur on DoD lands are included.

In addition to helping prioritize monitoring programs and National Environmental Policy Act (NEPA) documents, the final list will be used

Red-headed Woodpecker is one of the species identified by DoD PIF as mission-sensitive for Department of Defense lands. (Photo: Chris Eberly)

as a basis to evaluate proposals for funding from the Legacy Resource Management Program and guide the development of conservation measures to support Executive Order 13186 (*Responsibilities of Federal Agencies To Protect Migratory Birds*), the associated Memorandum of Understanding, and the Final Migratory Bird ("Readiness") Rule. BirdLife Caribbean also reviewed the list and identified Important Bird Areas in the Caribbean where these species over-winter.

¹FWS Candidate Notice of Review
²Army Species at Risk

¹LPN: The USFWS assigns a Listing Priority Number to Candidate Species, based on an analysis of the immediacy and magnitude of threats, from 1 (highest) to 12 (lowest).

Implementation of the DoD Coordinated Bird Monitoring Plan

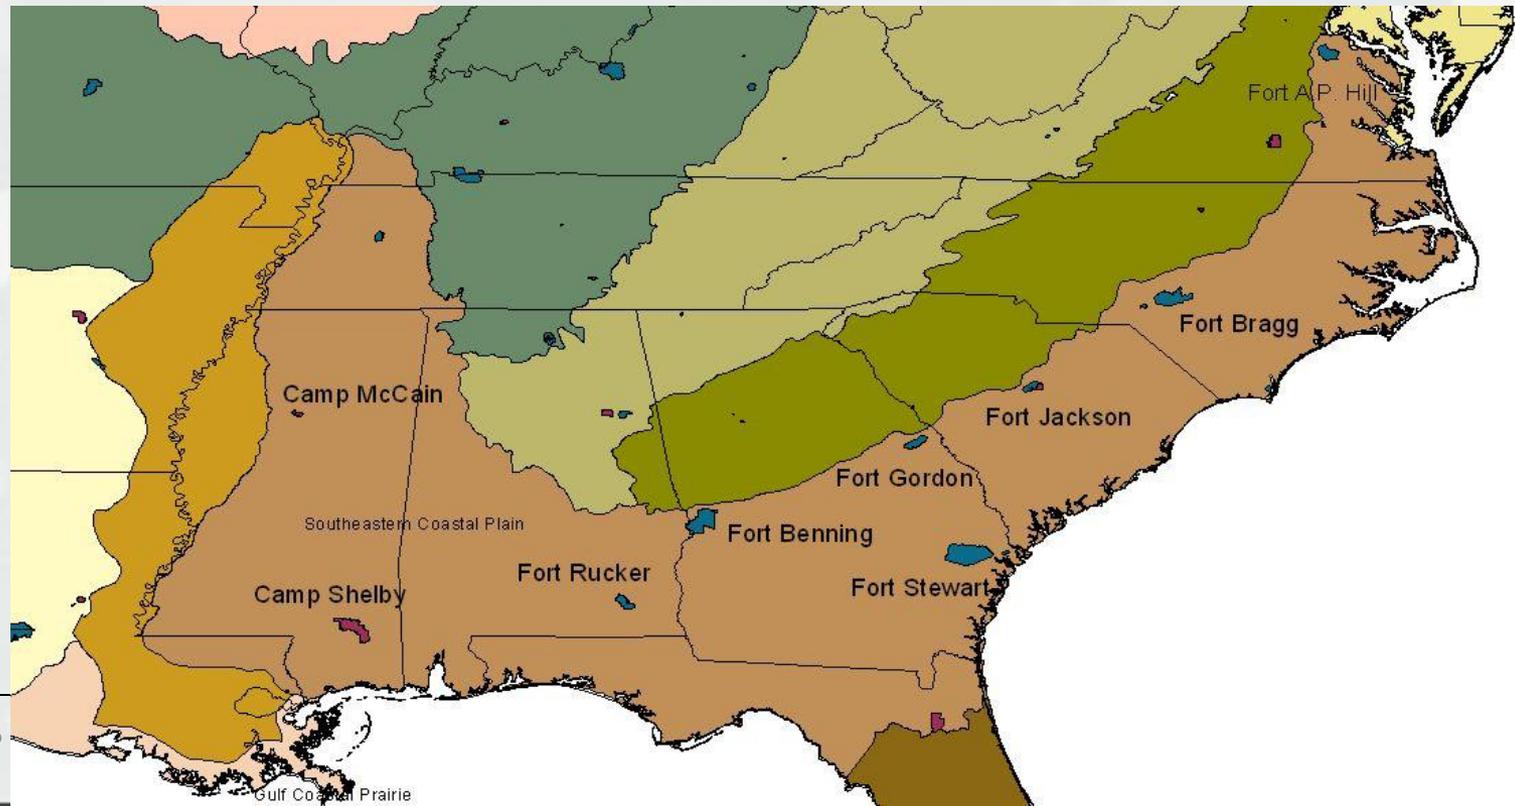

Objectives:

- (a) provide technical advice to DoD biologists on survey design and analysis of survey data,
- (b) continue refining the Coordinated Bird Monitoring Database (CBMD) that provides long-term storage for DoD bird survey data, and
- (c) to develop various decision support tools, especially one to calculate the fraction of DoD Mission-sensitive Priority Bird Populations that occur on DoD lands (relative to BCR or Global populations).

CBM Implementation Plan

(a) to develop various decision support tools, especially one to calculate the fraction of DoD Mission-sensitive Priority Bird Populations that occur on DoD lands (relative to BCR or Global populations).

BUILDING STRONG®

CBM Implementation

This will allow

- **Identification of installations that contribute significantly to SOC populations within BCR's,**
- **Recommendations for monitoring those SOC, and**
- **Assessment of DoD responsibilities relative to NEPA requirements.**

Sikes Act

Innovative solutions for a safer, better world

Background

- The DoD administers ~29 million acres of land on over 400 military installations in the United States
- ~425 federally-listed species and ~520 species at risk
- ~250 installations have at least one listed species
- Current best guess estimates suggest there are more than 1,000,000 acres of inaccessible “impact” areas with little to no monitoring data
- DoD needs monitoring data from these areas to contribute to the overall understanding of migratory bird populations inhabiting DoD installation habitats.

Objectives

- Demonstrate the Autonomous Aerial Acoustic Recording Systems (AAARS) capability to collect vocalization data among a variety of species and habitats;
- Properly estimate density of TER-S birds with aerial transect data;
- Show relevance of data for making improved decisions (i.e., regulatory, legislative compliance, stewardship of TER-S birds);
- Train DoD natural resources staff to use AAARS and evaluate their ability to deploy the technology as well as analyze and use data collected; and
- Show cost-effectiveness across a range of DoD installations.

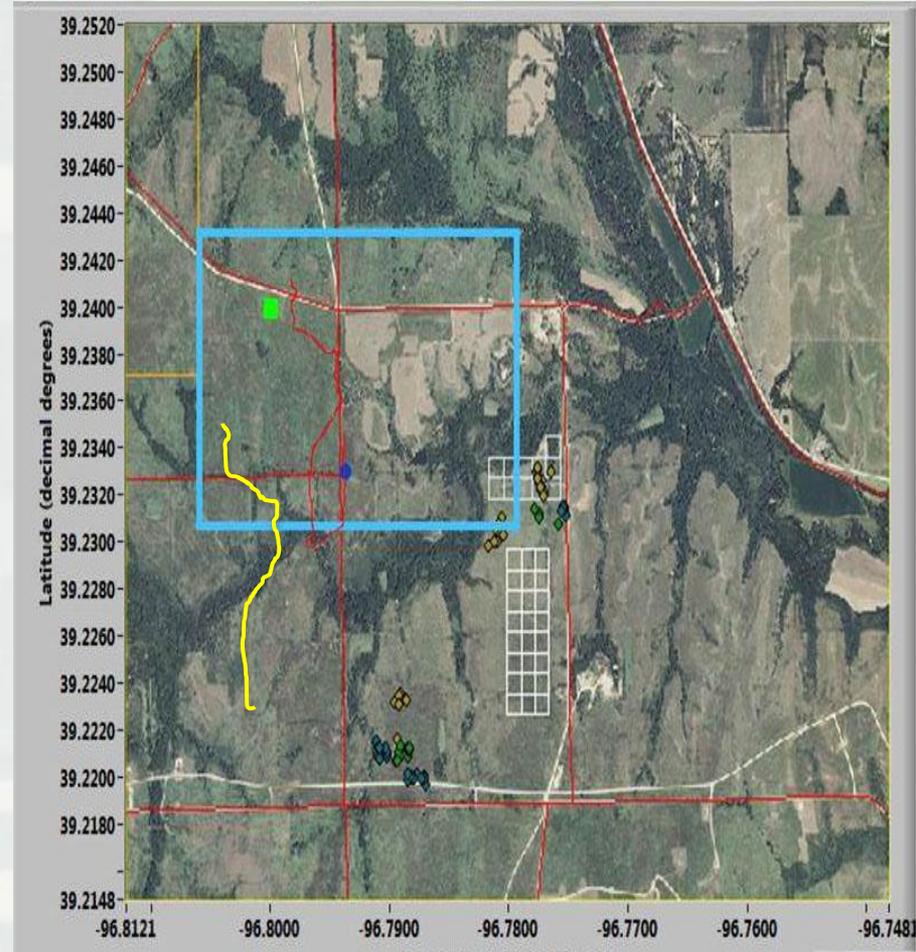

AAARS System

- Lifting system
- Microprocessor
- RF communications
- GPS system
- Altitude control
- Digital audio recorder
- Power supply
- PC-based ground tracking/control stations

Field Operation

- Balloon is released on downwind side of target area
- Vehicle flies with ambient wind direction and speed
- Onboard altitude control
- Recovery is on windward side of target area

UT Environmental Sensors Lab

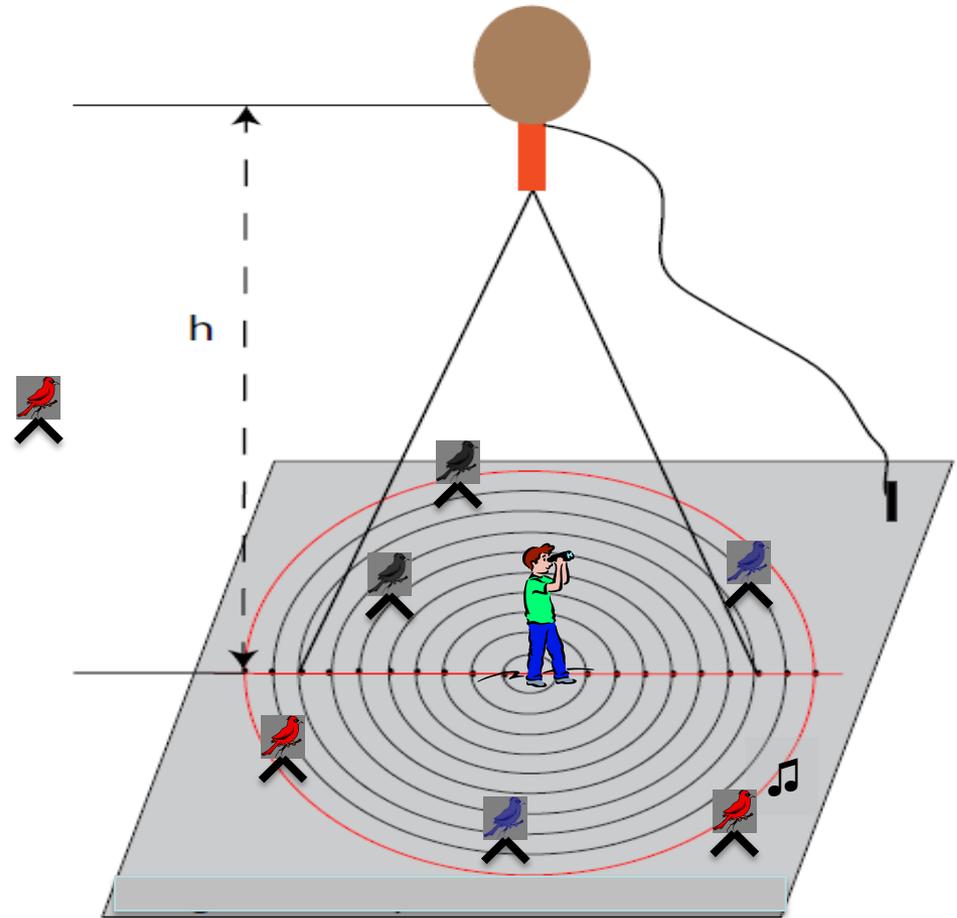

Bird Song Simulators

- UT Biosystems Engineering developed computer remote-controlled mp3 players
- Play target species audio tracks of actual bird songs from Cornell library
- Programmable by species, timing, location
- Unique label on each track to allow for identification of target species and individuals
- Calibrated to field-measured amplitude for each species
- Produces absolute known place and time for target species

Static Test Design

- 10-min point count
- AAARS vs. human observer
- Bird song simulators or real birds

150 m radius

Supplemental Field Studies

- Territory size for focal species
 - ▶ Map territories of sample of males to document mean territory size
- Song frequency for focal species
 - ▶ Place automated recording units in center of territory of target species
 - ▶ Document song frequency by time of day and day of season
- Develop song library for focal species

Analysis of Acoustic Data

- MATLAB, XBAT, and RavenPro software
- Analyze acoustic files for detections of focal species songs based on spectrogram matching, Band Limited Energy Detection, amplitude detection, and neural networks
- Developed Neural network-based spectrogram analysis at UT
- Validate the correct classification rate of the AAARS data for comparison with human-collected data

Technical Progress - Hardware

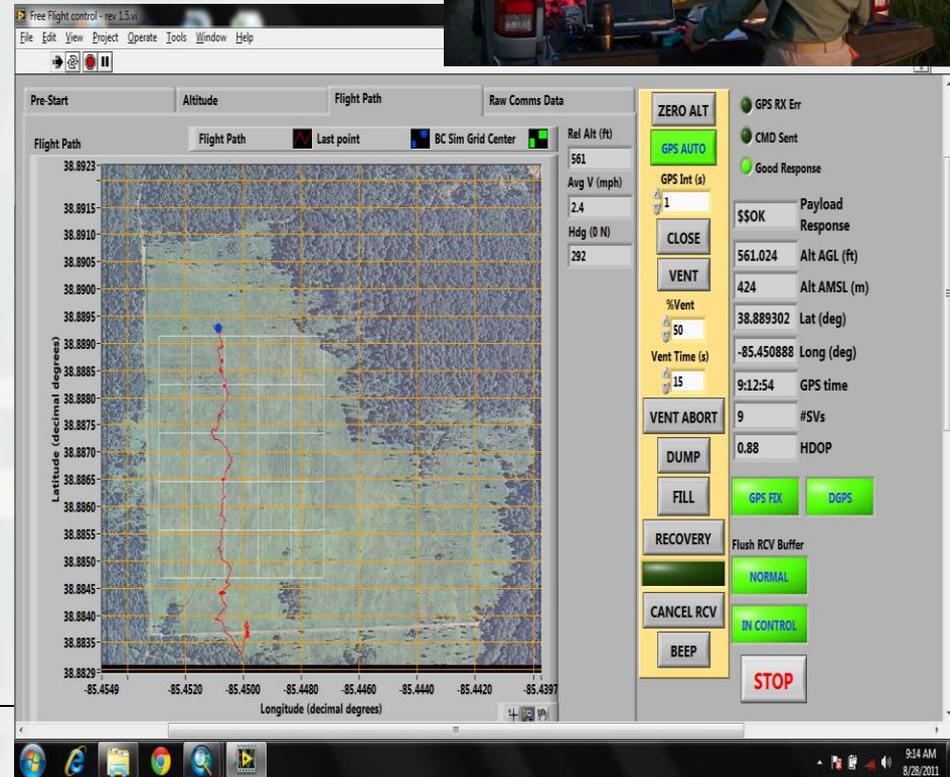

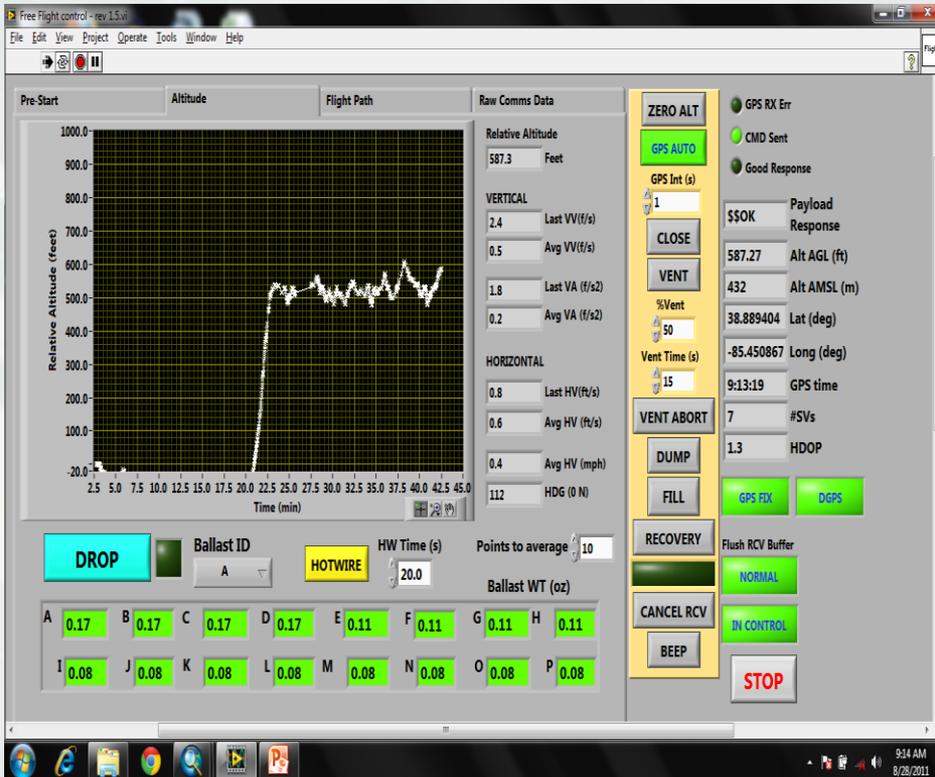

- Designed and built AAARS systems
 - ▶ n = 6 in 2011
 - ▶ n = 10 in 2012
 - ▶ n = 10 in 2013
- Designed and built base station communication modules
 - ▶ n = 6 in 2011
 - ▶ n = 6 in 2012
- Designed and built bird song simulators
 - ▶ n = 60 in 2011
 - ▶ n = 50 in 2012

Technical Progress- Software

- Base station computer interface with Labview software

Altitude tracking and control
Location tracking and control

Technical Progress Data Acquisition

As of July 2013...

- 2 field seasons completed at each research site
 - **405** successful flights total
 - **280** successful free flights
 - **325** Point counts
 - **321** Line transects

Technical Progress

Validation of Performance

Conducted 335 free flights at Fort Riley, Fort Bragg, and JPG in 2011-2013

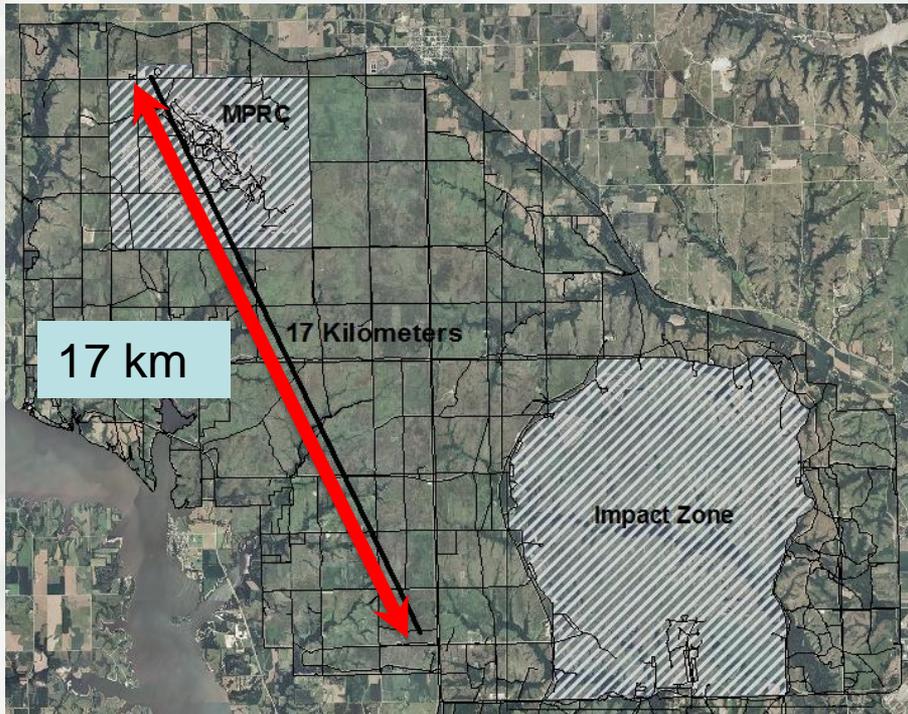

- ◆ 95% success on pre-flight
- ◆ 95% hit target area
- ◆ 89% maintained target altitude
- ◆ 83% with good audio data
- ◆ 99% were recovered
- ◆ Total Free Flight Success (with audio) = 74%

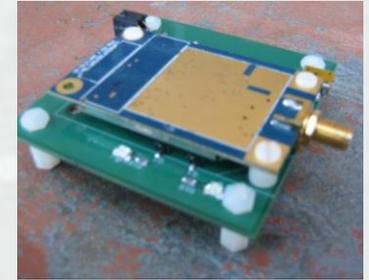

Technical Progress

Validation of Performance

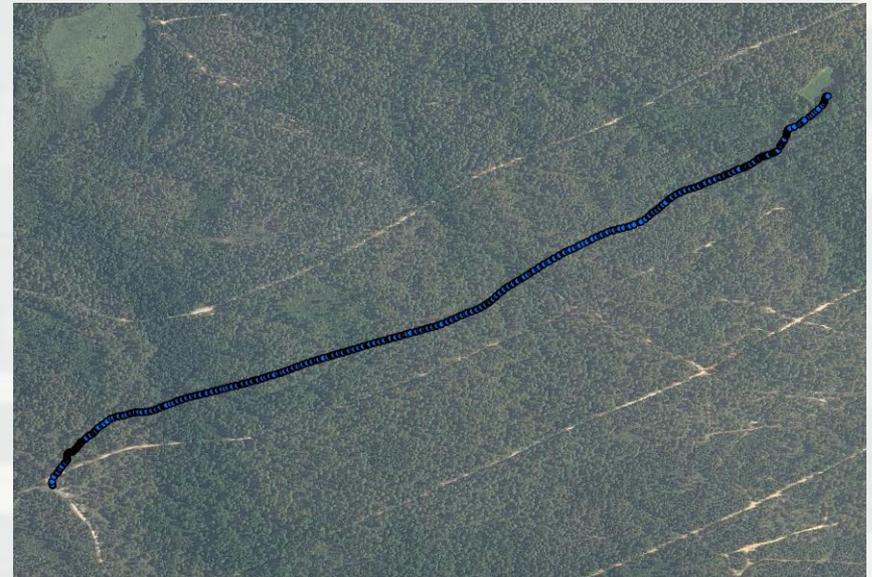

- Communications

Yagi antenna

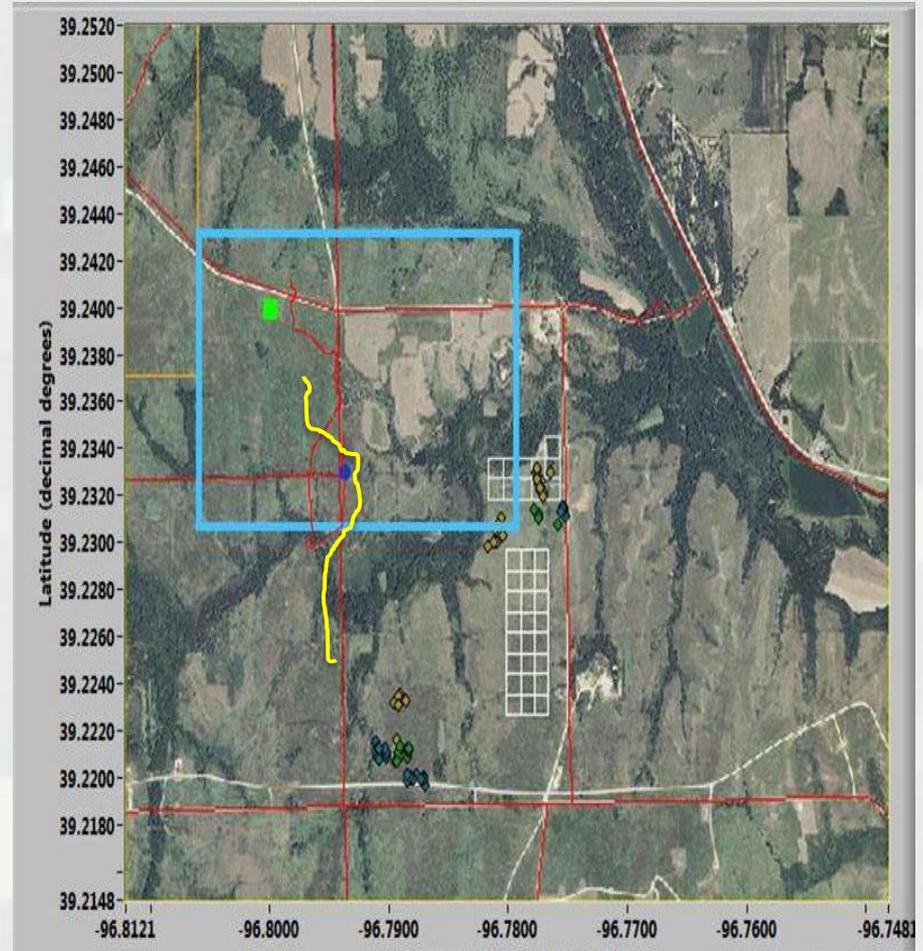

1 W RF modem

Validation of Performance

- Latitude/Longitude Control- “Fly the GPS box”
- Based on 31 flights at JPG with box:
 - 30 successful recovery
 - 1 box did not work (user error?)
 - ▶ 96% success
- Altitude limit?

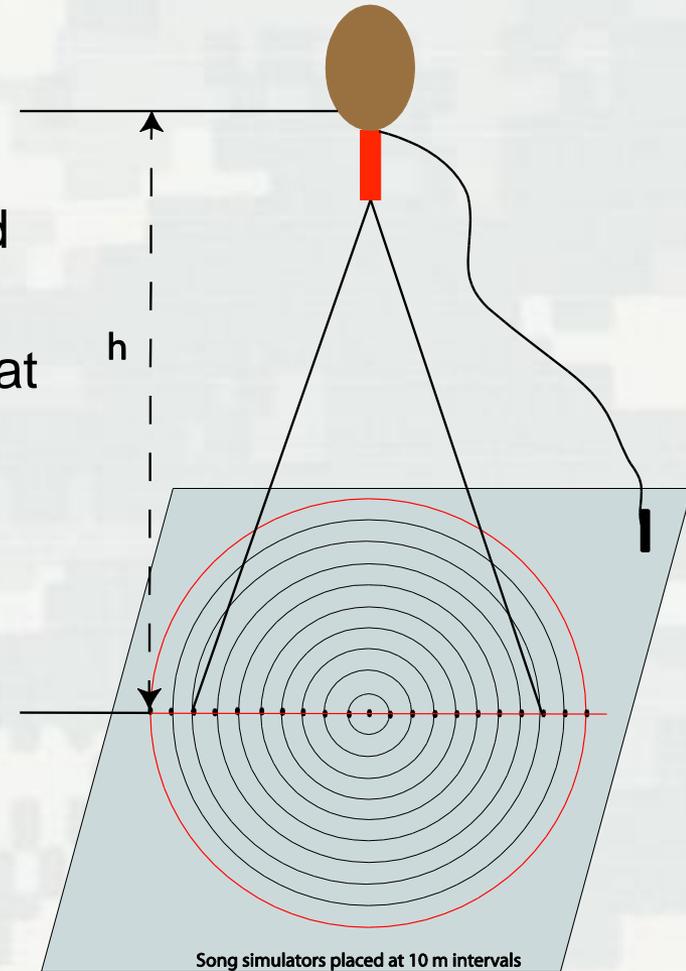

Technical Progress

Validation of Performance

■ Microphone Footprint

- ▶ Tethered AAARS at point-center
- ▶ Walked song simulators down transect and stopped at 10-m intervals out to 300 m
- ▶ Played 2, 5, and 8 kHz tones at each stop at target bird amplitudes
- ▶ Conducted tests at 100 m, 200 m, and 300 m altitudes (h)
- ▶ Analyzed the resultant audio files to determine effective detection distance horizontally and vertically

Technical Progress

Validation of Performance

- Detection Rates- Real and Simulated Birds
 - ▶ Target = 90% for simulated birds and 80% for real birds
 - ▶ Results from simulated bird point counts
 - 88% for HESP detection (8.5% False Positive)
 - 83% for PRAW detection (5.0% False Positive)
 - altitudes between 100-200 m
 - based on a 3-7 detector models in XBAT

Technical Progress

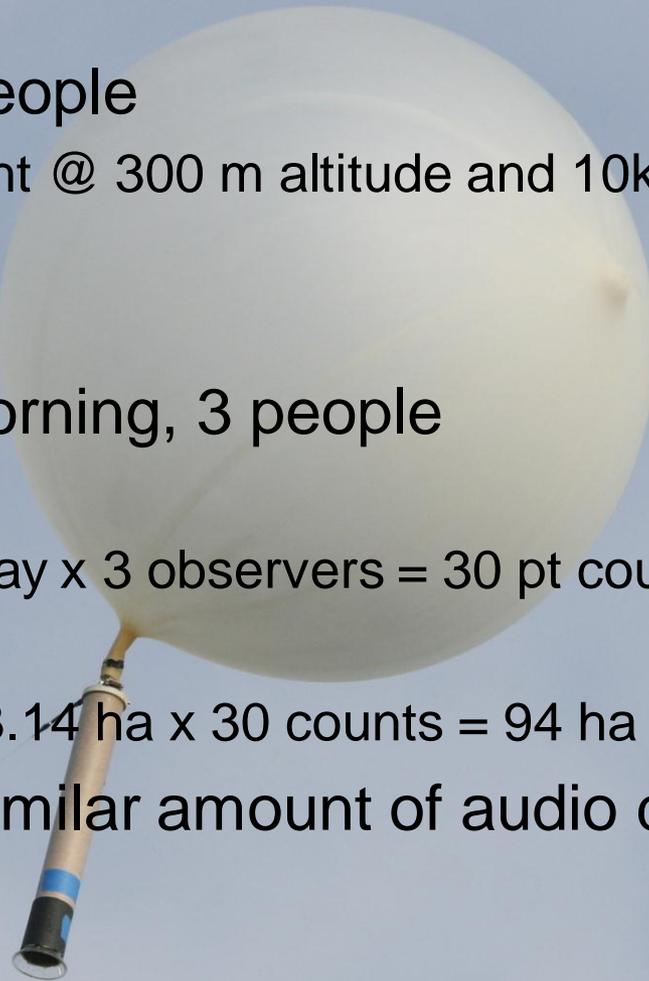

Validation of Performance

- AAARS accuracy and precision of detections compared to estimates from human observers
- AAARS classification rates- simulated birds and real birds compared to human observers
- Prairie Warbler analysis- AAARS vs. humans

	Available	Human Detected	AAARS Detected
JPG	129	83 (64%)	117(91%)
FB	139	110 (79%)	135(97%)
TOTAL	268	193 (72%)	252(94%)

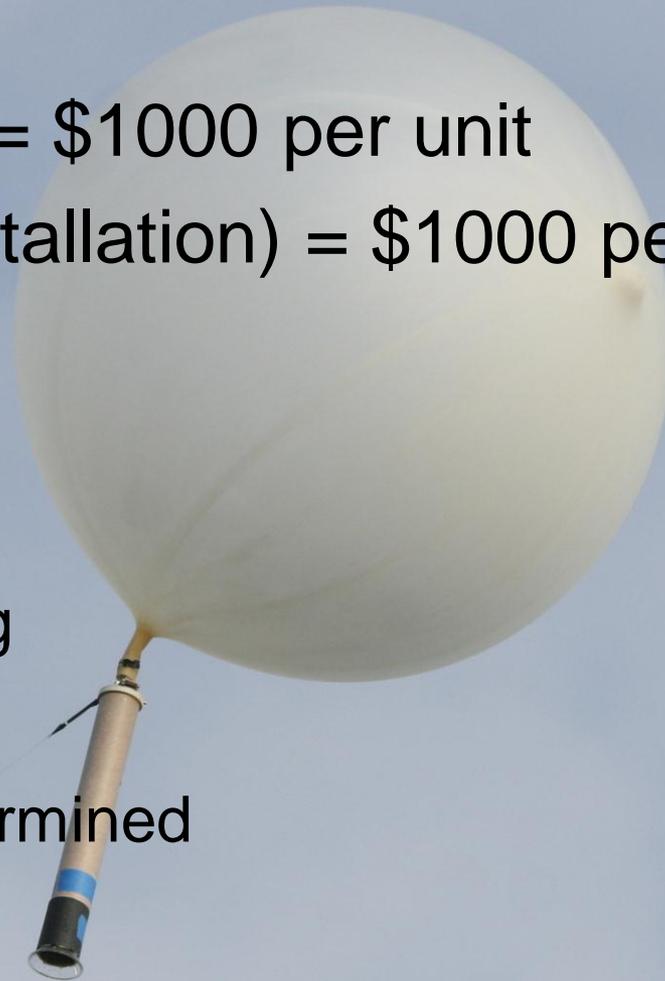

AAARS vs. Human Observers

- AAARS- 1 morning, 3 people
 - ▶ 5 flights @ 10 km per flight @ 300 m altitude and 10km/hr speed
 - ▶ 3000 ha surveyed
 - ▶ ~300 min of audio data
- Human Observers- 1 morning, 3 people
 - ▶ 10-min pt counts
 - ▶ 10 counts per observer/day x 3 observers = 30 pt counts
 - ▶ 300 min of audio data
 - ▶ 100-m radius pt count = $3.14 \text{ ha} \times 30 \text{ counts} = 94 \text{ ha}$ surveyed
- 33x the area covered, similar amount of audio data

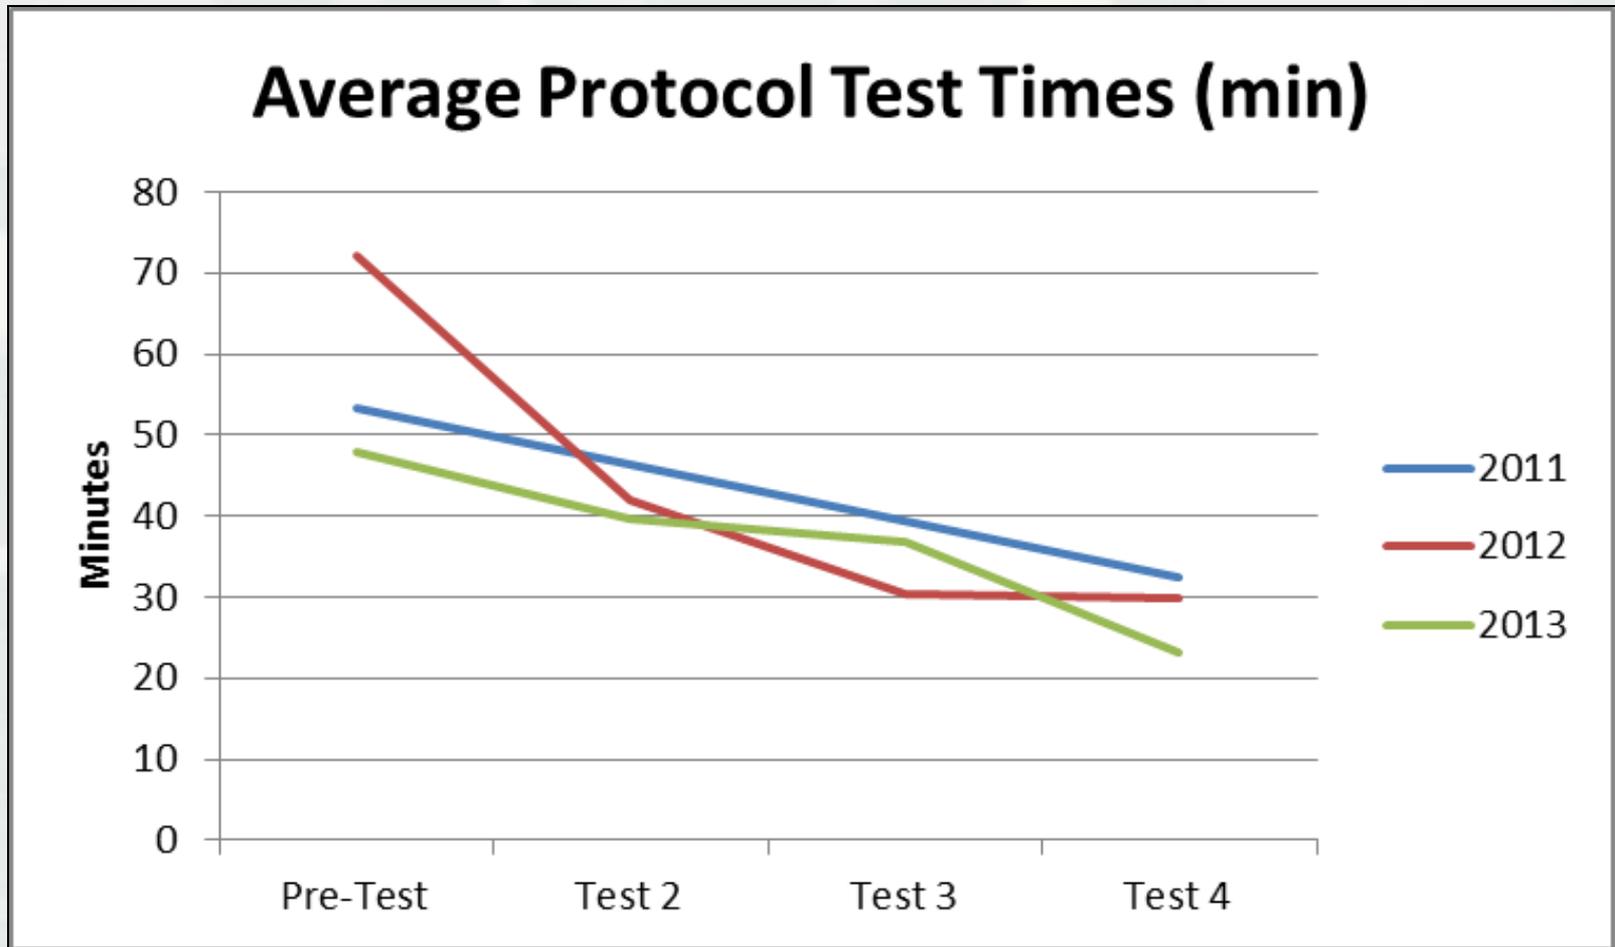

Cost

- AAARS fabrication = \$1000 per unit
- Base stations (3/installation) = \$1000 per base station
- Field operation
 - ▶ 3 trained personnel
 - ▶ 5 flights per morning
- Acoustic Analysis
 - ▶ costs still to be determined

AAARS vs. Human Observers

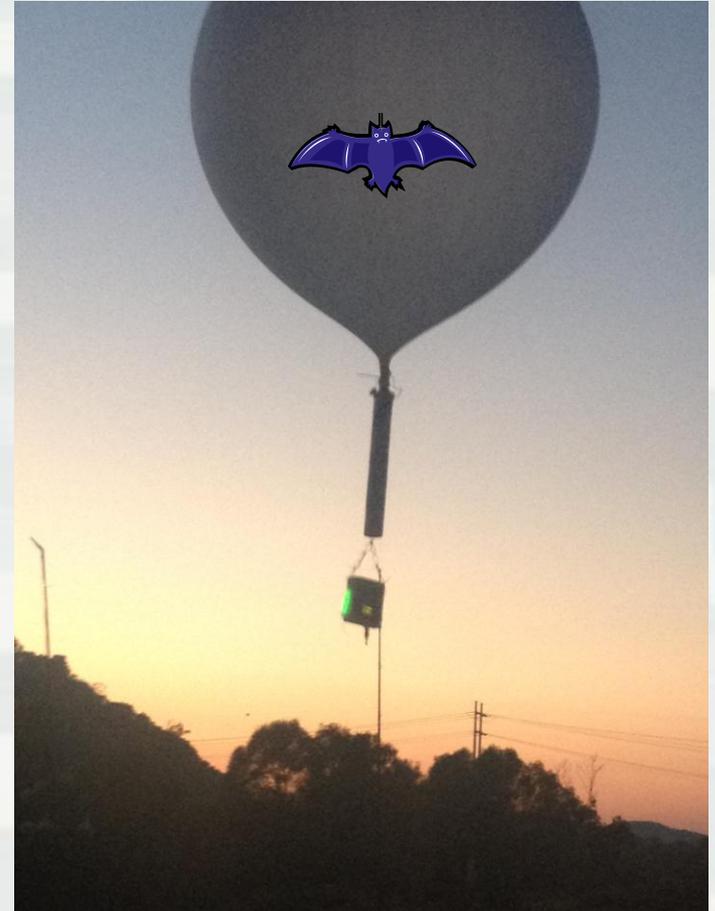

Other Applications?

- Initial feasibility assessment for adding bat detection technology to AAARS

Pettersson bat detector with balsa wood box, hanging attachments, and Li-Ion battery

QUESTIONS?
