

Wyoming

Camp Guernsey

Facility and Location

Camp Guernsey, established in 1939, is located on the North Platte River in southeastern Wyoming, approximately 80 miles north of Cheyenne and 90 miles southeast of Casper. The installation comprises several scattered pieces of land, most of which fall into the North Training Area, South Training Area, and Cantonment, totaling 78,903 acres. Elevations range from 4,264 feet in the South Training Area to 5,258 feet on Baldy Mountain.

Camp Guernsey is a brigade sized site that offers year round training opportunities. This combined maintenance facility is now a joint facility with the Air Force providing a regional training facility for their Global Strike Command. Its primary mission is to provide a major training area and logistic support for Wyoming Army and Air National Guard units. Secondly, it hosts other National Guard, Reserve, and Active military units. Emphasis is on field artillery training, but facilities are also available for infantry, engineer, aviation, maintenance, and medical units.

Camp Guernsey's usage is currently increasing. During 1999, 5,104 individuals spent one or more days at Camp Guernsey. Man days recorded were 268,469. Fifteen states and 129 different units were represented along with the Royal Air Force from Great Britain, which sent 15 personnel for 25 days of training. The Combined Vehicle Maintenance Facility at Camp Guernsey was completed in 2011. The Camp Guernsey fuel point was nearly 63 percent complete and was scheduled for completion in the fall.

Media Sampled and Findings

Drinking Water — In 2011, ten of ten samples detected perchlorate from 0.14 and 0.30 ppb.

Appropriate Actions

Not Applicable. All samples were below the EPA and DoD Preliminary Remediation Goal of 15 ppb.
