

DEPARTMENT OF THE ARMY
ASSISTANT CHIEF OF STAFF FOR INSTALLATION MANAGEMENT
600 ARMY PENTAGON
WASHINGTON, DC 20310-0600

DAIM-ED

MAY 25 2006

MEMORANDUM FOR SEE DISTRIBUTION

SUBJECT: Interim Army Guidance on Perchlorate for Restoration/Cleanup Activities

1. Reference.

a. Memorandum from Deputy Under Secretary of Defense (Installations and Environment), Policy on DoD Required Actions Related to Perchlorate, 26 Jan 06 (Enclosure 1).

b. Memorandum from Assistant Chief of Staff for Installation Management, Department of Army Guidance for Assessing Potential Perchlorate Contamination, 11 Jun 04.

c. DoD Perchlorate Handbook, Mar 06
(<http://www.navylabs.navy.mil/Archive/DODPerchlorateHandbook.pdf>).

2. This memorandum applies to all Army facilities and Formerly Used Defense Sites (FUDS) located within the United States and provides authority for the Army's Installation Restoration program and Compliance Cleanup Programs to comply with the Department of Defense (DoD) Policy on DoD Required Actions Related to Perchlorate (Reference a.). This memorandum rescinds the sampling approval and notification requirements in the DA perchlorate Guidance (Reference b.) and further removes the stipulation that sampling can only be conducted if "a complete human exposure drinking water pathway is likely to exist". This memorandum also asks that any perchlorate investigation/sampling be performed after consulting the DoD Perchlorate Handbook (Reference c.).

3. On January 26, 2006 the DoD released new perchlorate policy (Reference a.) which outlines requirements for environmental restoration activities. The DoD policy has established that if sampling indicates perchlorate concentrations in water exceed 24 parts per billion then a site-specific risk assessment should be conducted to evaluate the extent of actual or potential exposures. Further, if a site-specific risk assessment indicates perchlorate concentrations could potentially result in adverse health effects, the site will be prioritized for appropriate risk management.

4. The DoD policy (Reference a.) requires that risk assessments be conducted in accordance with Defense Environmental Restoration Program (DERP). This memorandum authorizes the Army's Installation Restoration Program to address

DAIM-ED

SUBJECT: Interim Army Guidance on Perchlorate for Restoration/Cleanup Activities

perchlorate in accordance with DERP and authorizes the Army's Compliance Related Cleanup Program to address perchlorate in accordance with applicable environmental regulations, as appropriate. Under either approach, the Army's Cleanup programs should treat perchlorate as they would any other chemical element or compound that has an agreed-upon reference dose.

5. The point of contacts for this action are Mr. Malcolm Garg, 703-601-0513, malcom.garg@hqda.army.mil and Ms. Laurie Haines, 703-601-1590, laurie.haines@us.army.mil.

FOR THE ASSISTANT CHIEF OF STAFF FOR INSTALLATION MANAGEMENT:

Encl

JEFFREY G. PHILLIPS
Colonel, GS
Acting Director, Environmental Programs

SUBJECT: Policy on DoD Required Actions Related to Perchlorate

On January 10, 2005, the National Academy of Sciences completed its toxicological review of perchlorate. Based on the results of the NAS review, the U.S. Environmental Protection Agency (EPA) adopted an oral reference dose (RfD) for perchlorate, which, when used to calculate a Drinking Water Equivalent Level (DWEL), is equivalent to 24.5 parts per billion (ppb). If EPA determines regulation under the Safe Drinking Water Act (SDWA) is appropriate, it will establish a Maximum Contaminant Level Goal (MCLG). Once an MCLG is established, EPA will set an enforceable Maximum Contaminant Level (MCL), which is set as close to the MCLG as feasible using the best available analytical and treatment technologies and taking cost into consideration. Historically, MCLs have been set at levels different from the DWEL. Until such time as EPA or the states promulgate standards for perchlorate, DoD is establishing 24 ppb as the current level of concern for managing perchlorate. Once established, DoD will comply with applicable state or federal promulgated standards whichever is more stringent.

This guidance supersedes the September 29, 2003, memorandum, "Interim Policy on Perchlorate Sampling," and applies to active and closed installations, operational and other than operational ranges, and Formerly Used Defense Sites (FUDS) within the United States, its territories, and possessions, except where otherwise noted. The sampling results generated pursuant to this guidance must be retained by the installation and included in regular updates to each Component's perchlorate database. Semi-annual Environmental Management Reviews will include, on an as-needed basis, reporting requirements for perchlorate.

For drinking water systems and wastewater effluent discharges, perchlorate sampling and follow-on actions taken pursuant to this policy will be considered an Environmental

ENCLOSURE

Quality Status Class I requirement under DoDI 4715.6, "Environmental Compliance," and DoDI 4715.5, "Management of Environmental Compliance at Overseas Installations."

DoD Components shall program resources and address perchlorate under the following programs:

Environmental Restoration

DoD shall sample for perchlorate as required by the National Contingency Plan. Where sampling indicates perchlorate concentrations in water exceed the level of concern (24 ppb) established above, DoD Components are directed to conduct site-specific risk assessments in accordance with the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA), the Defense Environmental Restoration Program (DERP), and/or the National Contingency Plan to evaluate the extent of actual or potential exposures. No federal or state Applicable or Relevant and Appropriate Requirements (ARARs) have been promulgated at this time. Risk assessors and risk managers may, when appropriate, identify other federal or state advisories, criteria, or guidance to be considered (see 40 CFR 300.400(g)(3)). If a site-specific risk assessment indicates perchlorate concentrations could potentially result in adverse health effects, the DoD Components will prioritize the site for appropriate risk management.

DoD Components may only use environmental restoration funding for activities meeting DERP eligibility requirements described in the current version of the DERP Management Guidance.

Any overseas response actions will be conducted in accordance with international agreements and DoDI 4715.8, "Environmental Remediation for Overseas Activities."

Operational Ranges

DoD Components will assess for the off-range migration of perchlorate from operational ranges in their respective Operational Range Assessment programs consistent with DoDD 4715.11, "Environmental and Explosives Safety Management on Operational Ranges Within the United States," and DoDD 4715.12, "Environmental and Explosives Safety Management on Operational Ranges Outside the United States."

DoD-owned Drinking Water Systems

DoD-owned drinking water systems that are required to sample for inorganic analytes pursuant to regulatory requirements shall add perchlorate to their current analyte list. Installations with confirmed results that indicate the presence of perchlorate in finished drinking water shall notify their headquarters and consult with them on appropriate actions, which may include development of an action plan to reduce exposure to perchlorate as appropriate for the protection of public health. At a minimum, these installations shall

continue sampling quarterly until they and their major command are satisfied that perchlorate concentrations are likely to remain below the level of concern (24 ppb). Installations that do not detect perchlorate in drinking water at concentrations above 4 ppb for two consecutive sampling events are not required to continue sampling for perchlorate unless otherwise required to do so by regulation or permit terms. The requirements of this paragraph also apply to water systems at overseas permanent facilities that are required to conduct sampling.

DoD Wastewater Effluent Discharges

DoD Components shall sample semi-annually for perchlorate at permitted point sources where use of perchlorate is associated with processes related to the manufacture, maintenance, processing, recycling, or demilitarization of military munitions. Sampling will be conducted in conjunction with effluent sampling conducted under the permit applicable to that point source. Installations with confirmed results that indicate the presence of perchlorate in wastewater effluent discharges shall notify their headquarters and consult with them on appropriate actions. Depending on applicable water quality standards and other factors (e.g., mixing zones), permit modifications and/or follow-on actions may be required. Nothing in this policy is intended to diminish any requirements established by wastewater discharge permits issued by EPA, state, or host nation regulatory authorities for DoD installations or operations.

This policy is effective immediately.
