

OUTDOOR RECREATION SAFETY

Many areas currently used for outdoor recreation once played a vital role in preparing our armed forces for national defense. Millions of acres in the United States and along its shores are known or suspected to contain military munitions. Munitions encountered on land or underwater should be considered dangerous. They can explode if disturbed or handled.

For questions or additional information regarding recreational activities, contact:

Always use caution when participating in outdoor activities and follow the 3Rs of Explosives Safety:

-  **R**ecognize – when you may have come across a munition and that munitions are dangerous.
-  **R**etreat – do not approach, touch, move or disturb it, but carefully leave the area.
-  **R**eport – call 911 and advise the police of what you saw and where you saw it.
